

NAVAL STATION PEARL HARBOR

PEARL CITY, HI

OVERVIEW

Composite ship separators are designed to handle the berthing energy of CG and DDG class surface vessels. Fiberglass construction makes separators resistant to corrosion, and the surface of these structures is coated with an epoxy non-slip coating that greatly increases safety. Separators can be built to almost any size. This application used four camels at 40 ft., each and one camel measuring 80 ft.

Owner: US Navy

Installation date: October 2017

PRODUCT DIMENSIONS

Length	40 ft to 80 ft
