

TubeCheck™

SAFETY IN KNOWING

The clear choice in tubular exchanger inspection methods

THE COMPREHENSIVE TEST

Verify the integrity of your tubular heat exchangers —
in one simple test

- Avoid cross contamination between two fluids by checking your unit for **LEAKS**
- Can test many makes of tubular units, including double and triple tube units
- Inspect unit **ALIGNMENT**
- Visual inspection of **FRAME CONDITION** noting any worn or damaged parts

How is **TubeCheck** performed?

- The tubular heat exchanger is pressurized with an inert gas - No chemicals are used.
- All sections in the frame are tested simultaneously.
- Our detection instrument will find leaks through defects in the tubes.
- A written inspection report is supplied for each visit summarizing each unit and listing the items found, with recommendations.
