The Thrive Difference

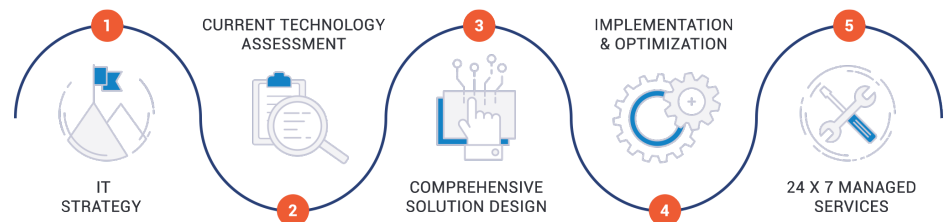

Today's shifting tides of technology innovation create challenges and opportunities. As more and more workloads shift to the Cloud, IT management is now about making technology work outside the corporate walls more than within. Thrive is a leading provider of NextGen managed services designed to drive business outcomes through application enablement and optimization.

We have support teams of expert engineers dedicated to Cloud, security, network management, disaster recovery, business continuity, and more.

We still roll up our sleeves with internal IT teams to manage helpdesk and traditional LAN environments, but leveraging Thrive's NextGen technology expertise will ensure your organization is ahead of the curve, and leveraging technology to its fullest.

Thrive's NextGen services leverage the **Thrive5** Methodology, which provides each customer with a unique strategy to optimize and protect their business data and applications. This methodology ensures access to the latest Cloud and on-premise technologies, advanced cyber security best practices, advanced networking solutions and compliance & governance assistance.

Thrive5 provides customers a unique opportunity to leverage a meaningful IT roadmap that takes advantage of NextGen technology and services, driving both efficiency and cost effectiveness.
