FASTPATH

Fastpath Identity Manager for Microsoft Dynamics®

Intelligent Identity Access Management without IT Intervention

The process of adding new employees with the right security access into Microsoft Dynamics is typically an inefficient, manual process. Several layers of approvals, disparate systems and outdated forms create unnecessary delays and increased costs. Fastpath's Identity Manager allows business process owners to request access changes online generating automatic submissions for management approval. Approvers gain visibility to all SoD risks prior to granting access. Once approved, users are created automatically without IT intervention. Simple to use and intuitive reporting tracks all changes to security access. Fastpath's Identity Manager increases productivity, reduces risk and delivers exceptional functionality.

Features

- Request Microsoft Dynamics user creation and role assignments within Identity Manager
- Visibility into SoD risks during requests and approvals
- Multi-level management approval structures
- Flexible approval rule scenarios—user to user, user to group, group to user, group to group, user to role
- Restrict users from approving their own request
- Multiple Active Directory scenario configuration options
- Comprehensive reporting on requests and approvals

Compatibility ERP

- Microsoft Dynamics AX: 3, 4, 2009, 2012, 2012 R2 & R3
- Microsoft Dynamics GP: 6, 7, 8, 9, 10, 2010, 2013, 2013 R2, 2015, 2015 R2
- Microsoft Dynamics NAV: 5, 2009, 2013, 2015, 2016
- Microsoft Dynamics SL: 6, 7, 2011, 2015
- Microsoft Dynamics CRM: 4.0, 2011, 2013, 2015

"Fastpath was recommended time and again from other Microsoft Dynamics users as THE solution to our problems."
