

Research as a Service

– Offensive Minded Security Exploit Development

Research as a Service (RaaS) offers a cost-effective, subscription-based solution for integrating the preventative benefits of an experienced security research team.

Our clients not only gain the ability to identify new threats in their software and products before they emerge, but also reduce the overhead associated with maintaining ongoing product security research. Our clients receive the knowledge of high impact zero-day vulnerabilities in their products, so they can remediate and stay ahead of attackers.

Zero-Day Vulnerability Research

This subscription-based capability provides organizations with immediate access to zero-day vulnerabilities affecting their business. VerSprite's cutting-edge security research team is dedicated to finding critical zero-day vulnerabilities in our client's technologies, enterprise networks, flagship products, environment, and more.

B.O.S.S. (Back of Store Security) Research

B.O.S.S. (Back of Store Security) Research is essentially a research for hire catering to client-specific goals and objectives. VerSprite's research team solves technical challenges thus allowing our clients to dive into the security internals of their products.

Advanced Security Training

VerSprite's advanced technical security training, created by VerSprite's Research and Development division, offers organizations unique and original content that challenges advanced users by pushing them to up their game in a technical discipline.
