

**VERSPRITE**

# Threat & Vulnerability Management

## – A New Level of Integrated Security Solutions

VerSprite's TVM team offers integrated security solutions that provide improved context around discovered vulnerabilities, 24/7 enterprise security monitoring, and experienced open-source intelligence gathering tradecraft. We develop and customize our threat model for our clients' specific needs. By managing solutions around this model and calibrating the model daily, VerSprite offers a more adaptive approach than simply responding to tickets. VerSprite's TVM team defines and fulfills on service levels that relate to measurable risk reduction activities around vulnerability management, file integrity monitoring, and SIEM monitoring. VerSprite investigates potential risks and tracks suspicious behavior using automated processes, threat analytics, and open-sourced intelligence gathering techniques. We capture threat indicators that identify both traditional and unconventional threats to your business.

## **Virtual Security Operations Center (vSOC)**

VerSprite provides 24/7 enterprise security monitoring using cloud-based architecture. This virtual approach allows for a completely remote team to deliver the same experience of having an in-house SOC, allowing for flexibility, minimal setup, and maximum scalability.

## **Continuous Vulnerability Management**

VerSprite offers ongoing vulnerability management to eliminate false positives, deliver custom remediation information to your environment, and address discovered issues.

## **Open Source Intelligence (OSINT)**

VerSprite utilizes our experienced OSINT gathering tradecraft along with powerful software tools to explore large volumes of proprietary information from rapidly changing sources.
