

Our invoice automation software smooths out administration bottlenecks and eases organisation complexity.

Electronically reads  
PDF invoices straight  
from your inbox

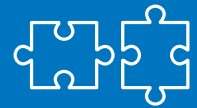

Key information is  
extracted and pushed  
through our web-based  
platform

Invoices are automatically  
delegated to the  
appropriate approver  
and cost code

An approver then  
confirms the coding  
and amount and  
clicks approve

Invoice data can then  
be transferred to a  
company's payment  
system for payment

Our customers report a  
70% workload saving  
to their business. Spend  
more time focusing on  
gaining market share and  
profitability with Lentune.

Our software easily  
integrates with your  
accounting software:

- Xero
- CostCon
- MYOB
- simPRO
- ServiceM8

plus many more...

### Key benefits of Lentune's invoice automation software:

- Eradicate data entry, plus the chance of human error, from your business.
- Automatically check the pricing on your supplier invoices is what has been agreed and negotiated with your suppliers.
- Gain valuable insights and reports on what you are ordering from your suppliers, to help bolster price negotiations.
- Eliminate paper clutter and the time your team spend chasing it around the office.
- Monitor and control who can approve invoices within your business with your own customisable approval hierarchy.
- All your invoices stored in the cloud so they can be searched at any time by whoever you allow.
- Increase the visibility and accountability within your organisation.

Lentune has a comprehensive suite of office automation products.
