

## Join us on our Mission to Revolutionize Drug Development and Personalize Care

At BC Platforms, we believe in the power of real-world data to speed healthcare research and reduce unnecessary patient risk in drug development. However, poor data stewardship often jeopardizes the ability for researchers to deliver the real-world data promise. Dated mindsets enforce long timelines of data exclusivity or silo usage of consented data, stifling the rate at which real-world data can yield needed insights. Rather than limiting data usage to a few institutions, BC Platforms believes consented patient data should be treated as a public utility, generating the maximum value in research for patients, caregivers and data providers.

To realize this vision, a framework that values equitable academic and industry research relationships while focusing on the generation of

new data is required. This framework must also value the contributions, privacy and sacrifices of patients donating their biological samples and health data to research.

BC Platforms has developed the optimal Global Data Partner Network and supporting framework that will enable realization of the full potential of real-world data and support a public-utility-like approach to data sharing. As a trusted, honest broker between drug developers and Data Partners, BC Platforms is able to ensure the greatest impact from usage of consented data for patients and Data Partners. Given the importance of security and privacy, we also adhere to institutional, local and national approval processes that surpass today's security and privacy requirements.

Global, Federated Data Partnerships Network Enabling Analytics and Deeper Insights

# Why be part of a Global Data Partner Network?

## More Powerful Collaboration

Our relationships with Data Partners focus on being good stewards of data by providing to our Data Partners:

- Sustainability and growth from revenue
- Maximized data generation/use and cutting-edge research opportunities
- Enhanced efficiency and alignment with global standards and local legislation
- Ability to do more with your current team
- Peace of mind they will retain ownership and control

## Provide Value for Data and Generate Additional Funding Sources

BC Platforms recognizes the inherent value that Data Collections hold within their institutions. We have developed a model within our network that ensures Data Partners are fairly compensated for the value they provide, including administrative efforts, and generating additional funding streams for the institution.

## BC Platforms Can Support a Global Network

BC Platforms is best positioned to enable a public-utility-like approach for data usage, maximizing insights and advancing medical research.

The centerpiece of the global Data Partner Network is BCRQUEST.com., a modern, secure and confidential technology-enabled service platform environment, to bring together Data Partners and Researchers. The architecture of BCRQUEST.com is federated, allowing the data to remain in the local premise(s) under the control of the Data Partner and behind their firewall. The data connected to the platform is anonymized, consented for secondary use and the access is controlled by procedures and software, based on local usage rights and pre-defined scope of research. Because of our ISO certified, novel platform, BC Platforms

## There are four key pillars to supporting a Global Network:

### Partnership Mentality

Like our Data Partners, we want to revolutionize drug development and patient care in a way that maximizes the value generated by the data around the world

### Foundation for Collaboration

Our Data Partners are able to collaborate with other academic, healthcare and pharmaceutical institutions on research projects and publication opportunities

### Institutional Control of Data & Generating Value

We provide a collaboration framework that keeps ownership and control of the data with the Data Partner at all times while strictly adhering to global and local data privacy and security regulations

### Unique & Secure Infrastructure

The BCRQUEST.com platform brings together Data Partners and Researchers to engage in new forms of scientific research and collaboration

is able to ensure the security of our Data Partner data in a public-utility-like setting.

## How to Join the Network

As a member of the Network, your data will be available on a global scale to contribute to the revolutionizing changes in drug development and patient care. Combined with the insight and tools that BC Platforms provides, your data will strengthen your own organization by expanding collaboration

opportunities and securing new funding sources. BC Platforms welcomes the opportunity to develop a partnership with you in the Global Data Partner Network.
