

S-NET's VoIP phone system seamlessly integrates with Microsoft Teams and allows you to make business calls from one unified interface.

## Make and Receive Business Calls with Teams

Give your staff the ability to make and receive business calls straight out of their Microsoft Teams account. Integrated with the S-NET VoIP business phone system, the Teams dialpad empowers your employees to call internal extensions and external numbers using their company caller ID to maintain a cohesive brand image at all times.

## Unify Your Communications

Increase your staff's efficiency by unifying your collaboration and voice communications. A Teams integrations requires no capital expenditures for hardware or software, and no additional platforms to manage or learn. It combines all your Teams collaboration tools your staff relies on with S-NET's VoIP calling features, such as Click-to-Dial and Presence.

## Communicate from Anywhere and Any Device

Give your staff full communication mobility by keeping them connected from anywhere and any device. S-NET's integration enables them to make and receive business calls in Microsoft Teams while working from home or on-the-go using any PC, Mac, Mobile or certified Teams device. Integrating Teams with your S-NET phone system provides users with a seamless transition between company and personal devices.

## Enjoy Enterprise-Grade Quality of Service

S-NET's Microsoft Teams integration provides a simple link between your VoIP cloud phone system and the Office 365 Teams platform. Relying on enterprise-grade, high-availability infrastructure that runs on Microsoft Azure, it provides your business with built-in security and resilience, as well as exceptional quality of service.
