

Integration with MuleSoft's Anypoint Studio

Overview

The OpenLegacy integration to Mulesoft's Anypoint Studio automates and simplifies the process of generating APIs for legacy and on-premise systems such as mainframes and AS/400s. With a couple of clicks, you can generate a consumable API to deliver a legacy transaction or program as an Anypoint node that seamlessly integrates in any Mulesoft workflow. No need for hand coding, data type matching or 3rd party middleware products. The OpenLegacy award winning API integration platform provides the fastest and most standard way for legacy integrations to be built with Mulesoft Anypoint Studio.

Key Benefits of OpenLegacy

- Generates Java code and provides IT flexibility.
- Connects to almost any legacy and on-premise backend system to retrieve metadata about existing applications.
- Automatically creates APIs from legacy back-end and on-premise apps.
- Parses metadata and generates code for run-time connection to legacy system.
- CI/CD friendly and easily deployed on any Java supporting infrastructure (Docker, PCF, Tomcat, etc).
- OpenLegacy can expose the following back-ends automatically as Mulesoft modules: AS/400 programs, AS/400 screens, Mainframe CICS programs, Mainframe IMS programs, Mainframe screens, IBM CICS Transaction Gateway, IBM MQ, Stored procedures: DB2, Oracle, SQLServer, Sybase, Tuxedo, SAP, Legacy core banking platform, payments

Key Benefits of MuleSoft

- Provides two interactive environments:
 - Web-based for managing Mule applications
 - APIs Eclipse IDE for creating, testing and building Mule applications.
- Allows creation of apps, in both environments, by dragging modules to a canvas, ordering them into flows and managing the flows.
- Provides management, connection, and loading of APIs in the cloud.
- MuleSoft has an Exchange portal to discover, share, and incorporate assets and resources into applications.
- Includes "Visualizer" with which to view, understand, and make decisions about published applications.
- Runs and monitors apps through CloudHub.

1. Create an SDK project in the OpenLegacy IDE based on the pre-generated MuleSoft template project.

Project Name:	as400-sdk						
Default Package:	com.as400_sdk.openlegacy						
Ue Custom Proj	ect Template						
Select Template	Zip O Select from Workspace						
[emplate:	C:\Users\Danief\Documents\AS400-demo\ol-as400-mule-connector-template.zip						
Backend:	A5/400 RPC						
Advanced Option	6						
10							

2. Populate the connection configuration (host, port, username, pass, etc.).

Host type	A5/400
	Open source provider for remote program calls for AS/400. http://jt400.sourceforge.net/
Host Name/IP:	
Code Page:	37 🗸
Username:	
Password:	

3. Generate entities from the structures of the complex back-end program.

3	Paste	Ctrl=V	
×	Delete	Delete	
Þ.,	Remove from Context	Ctrl+Alt+Shift+Down	
d	Mark as Landmark	Ctrl+Alt+Shift+Up	
	Build Path	>	
	Move		
	Rename	F2	
-	Import		
4	Export		
Ð	Refresh	F5	
ď	OpenLegacy)	Generate Model
	Validate		
	Open with Hex Editor		
	Run As	>	

SUPPORTED JAVA VERSIONS:

- Oracle JDK 1.8.0 (JDK 1.8.0_161 recommended)
- IBM JDK 1.8
- OpenJDK 8 (JDK 1.8.0_162 recommended)

SUPPORTED OPERATING SYSTEMS:

- MacOS 10.11.4
- HP-UX 11i V3
- AIX 7.2
- Solaris 11.3
- RHEL 7

 Write your logic and expose any functions you need to by wrapping the function with MuleSoft annotation @MediaType.

publ	ic	cla	ss O	las400	rp	cOperation	is ext	ends	Abst	ract0p	eration	{
(@Me	edia	Туре	(value	=	MediaType	.ANY,	stri	ct =	false)	
	puł	olic	voi	d temp	la	teMethod()	{					

5. Pack the connector into a JAR archive file by choosing the "Maven Build" option.

- 6. Register the JAR into the POM inside the Mulesoft application project.
- 7. Consume the legacy back-end by selecting OpenLegacy from the palette. In this case "OpenLegacy AS400.

- Windows Server 2016 (recommended), Windows 2012 R2 Server, Windows 10 (recommended), or Windows 8.1
- Ubuntu Server 15.04 or 16.04, or any other Linux distribution that runs a supported JDK and Linux kernel 3
