

This Is Your Building's Intercom

The first smartphone video intercom designed for the needs of the multifamily market.

- 12" and 7" touchscreen models available.
- Smartphone mobile app intercom.
- Eliminates all in-unit hardware and wiring.
- Record of every visitor.
- Cloud-based data storage.
- Front entrance touchscreen.
- Integration with property management software.
- Plug N' Play installation.
- No smartphone? No problem. Residents can still receive a phone call to open the door.

ButterflyMX

No Smartphone? No Problem!

Residents without smartphones receive a standard phone call, and they can still view messages and door release events via their web account.

Butterfly Virtual Keys

Virtual Keys are QR codes that guests or service personnel can scan at the panel for timed access (expires after 1-48 hours).

Get the Message Every Time

Visitors can leave detailed voice and text messages for tenants directly from the ButterflyMX panel.

Virtual Leasing Office

If there are multiple buildings and only one leasing office (on-or off-site), then visitors can still access the leasing office from any other building via voice or video call from the ButterflyMX panel.

CONTRACTS WITH TOP COMPANIES

For Property Managers

1 Easy To Use / Analytics

Web-based Building Manager Dashboard accessible anywhere. Audit and track door entry events to identify patterns like delivery frequency. Daily summary activity reports flag unusual door activity.

2 Enhanced Security

Keep track of all visitors going in and out of the building with photos and timestamps.

3 Integrates with PMS

ButterflyMX™ integrates seamlessly with existing property management software, helping you reduce data entry errors and speed up processing time for new tenants.

For Developers

1 Low Cost Alternative

Typical video intercoms require costly wiring upgrades and in-unit wall stations. ButterflyMX™ is cost effective and future proof: it features cloud-based storage and remote software maintenance.

2 Plug & Play Installation

ButterflyMX™ touchscreen panel needs only 4 hours to install, using 3 wires: power, ethernet, and door release.
