

ButterflyMX: Package Room Solution

Utilizing the same technology deployed in the ButterflyMX Smartphone Intercom Panel

The Flow

1

Carriers deliver to your building's package room via the ButterflyMX panel mounted at the package room door. As the carrier enters, ButterflyMX takes a time-date stamped picture of the individual.

2

After package delivery, residents are notified by email, text or in-app push notification of their packages' delivery.

3

Residents enter their code at the package room's touchscreen and pick up their item. ButterflyMX captures a time-stamped picture of the resident and a camera inside the room ensures that they are picking up their package.

ButterflyMX

ButterflyMX Solves This

Property Managers should not be doing FedEx/UPS/USPS or any delivery person's job.

Secure Delivery

Carriers to deliver packages via a secure pin or video call to resident.

Retrieval

Residents can retrieve their packages via their personal 4-digit pin.

Tracking

Residents to receive notification when their packages are in the room.

Integration

Leveraging ButterflyMX's existing integration with your property management solution ensures that all resident's names are updated in real-time.

Security

ButterflyMX captures a time date-stamp photo of everyone entering the package room. An additional camera tracks the activity in the room.

Increased NOI

All of this is accomplished with no involvement from your property management staff.
