

WEBSITE HEALTH CHECK

Your online business is growing – make sure it stays safe and secure.

STEP 1 External Scan

A Threat Intelligence Analyst performs a thorough assessment to look for any potential security issues or signs that your website may be compromised.

STEP 2 Internal Scan

Using our FGX-Web Solution, we look for malicious files or malware that may be hosted on your website to determine if you are under attack or possibly losing data.

STEP 3 Analysis and Reports

Within one week, we will send you a Website Health Check Report showing you any and all findings including malware alerts, suspicious traffic, vulnerabilities, or indicators of compromise.

STEP 4 Resolution

Your Threat Intelligence Analyst helps remove any malicious files found and shows you how to keep your website secure.

STEP 5 On-going Care

We provide 30 days of our full FGX—Web Managed Service, including an advanced Web Application Firewall to filter out suspicious traffic and the full support of our Threat Intelligence Team, who review your security alerts every 4 hours.

Website Health Check
