

ABOUT THIS GUIDE

The Manatee County Boater's Guide contains maps and information specific to the waterways of Manatee County, emphasizing manatee protection and boating safety speed zones. Many features of interest to boaters and anglers are displayed: locations of boat ramps, marinas, piers, parks and preserves accessible by water, aquatic preserves, watersport recreational areas, artificial reefs, navigational channels, and speed zones. A Resource Directory, along with information on marine life and native habitats, boating and angling safety, and ways in which boaters can help protect our local waterways, are also included. **This guide should not be used for navigational purposes. Instead, you may use nautical charts #11400 and #11420, which are available through NOAA.**

MANATEE COUNTY

Welcome to Manatee County

Manatee County is located along the west coast of Florida, south of Tampa Bay, with over 150 miles of coastline and 27 miles of white sand beaches. Mangrove forests, seagrass beds, salt marshes, and mud flats are among a few of the important coastal habitats which serve the abundant bird and marine animal populations of the County. Manatee County waters provide excellent recreational boating, fishing, and wildlife viewing.

Fishing has been a major industry in Manatee County for centuries. Today, both commercial and recreational fishing are important economic elements of the region.

Whether visiting or living in Manatee County, you too can make a difference by doing your part in protecting our waterways through safe and responsible boating and enhanced awareness of the region's precious natural resources.

Birds of the Bay Area

Some birds common to this region that you might see include the Great Blue Heron, Snowy Egret, Great Egret, White Ibis, Brown Pelican, American Oystercatcher, Osprey, Wood Stork, Roseate Spoonbill, and the endangered Florida Scrub Jay. The maps included in this guide highlight bird viewing opportunities such as bird hot spots, bird rookeries, and bird sanctuaries.

Loss and fragmentation of habitat is a threat to all birds and to all species of animals that inhabit the Gulf Coast Region.

Birding Tips

- Enjoy viewing bird rookeries from at least 100 yards away. These rookeries harbor nesting colonies and flocks of feeding birds. Boaters and operators of personal watercraft should slow down in order to reduce wakes in these birding areas. Large wakes resulting from higher speeds are responsible for the erosion of bird islands and mangrove areas, and the noise generated from higher speeds are disruptive to wildlife.
- Report injured seabirds that need assistance. Consult the Resource Directory of this guide for contact information.
- Pick up marine debris if you find it and don't discard any fishing line or other trash, which can be lethal to seabirds and other marine life, into the water.
- Remain quiet and move slowly to maximize bird viewing opportunities.

BRIDGES
Bridge tenders can be contacted on channel 9 of your marine radio. In an emergency, or in the event you are unable to contact the bridge tender by radio, the emergency toll free number is 866-335-9696.

BRIDGE OPENINGS
Anna Maria and Cortez Bridges:
May 16 - Jan. 14: opens on signal or on the hour and 20 and 40 minutes after the hour from 6 am to 7 pm; opens on signal between 7 pm and 6 am.
Jan. 15 - May 15: Opens on the hour and half hour from 6 am to 7 pm.
Longboat Pass Bridge:
Opens on demand.

DIVER DOWN FLAG
This flag indicates divers in the water. Boaters in the vicinity of a vessel displaying the diver down flag must give 100' clearance inshore or 300' clearance in the open waters, or drop to idle speed within these distances. A flag displayed on a vessel must be at least 20" by 24", and be displayed for 360° visibility. Flags attached to a float may be 12" by 12". A stiffener is also required to keep the flag unfurled.

LEGEND

- Intracoastal Waterway
- Intracoastal Waterway - 25 mph
- Regulated Channel - 25 mph
- Regulated Area - 25 mph
- Slow Speed - Minimum Wake Zone
- Safety Zone - Slow Speed - Minimum Wake
- Idle Speed - No Wake Zone
- Swim Area - No Vessel Entry
- Historical Recreation Area - Historically used for watersports
- Special Regulated Watersport Area - By permit only
- Manbirtee Key Security Zone - Entry by permit only
- Internal Combustion Engine Exclusion Zone
- Artificial Reef
- Marina
- Boat Ramp
- Draw Bridge
- Point of Interest
- Park/Preserve
- Bird Sanctuary
- Bird Viewing
- Exit Number

This chart is not intended for navigational use.
For navigation, see N.O.A.A. charts #11400-#11420
Use caution: Speed zones depicted on this map are accurate at the time of printing. Always look for and obey all marked speed zones and informational signs.

0 1/2 1 mile
Approx. scale

BOATER'S TIPS

- Take a boating education course. Log on to www.myfwc.com/boating
- Learn and observe the rules of the waterway - remember "red, right, return" when considering channel markers.
- Obey all navigational warnings such as slow- and idle-speed zones.
- Always pay close attention to what's going on around your boat.
- Wear your life jacket.
- Stay sober.
- Know how to swim.
- Know the limits of your boat and your boating abilities.
- Keep your boat in good repair.
- Tell others where you are going and when you plan to return.
- Be aware of changing weather conditions.
- Respect the rights of others.
- Check all boat equipment before each trip.
- Don't litter; properly dispose of all trash.

SAFETY EQUIPMENT REQUIREMENTS

The following equipment is required on recreational boats:

- **Personal Flotation Device (PFD)** - Must be available for every person on board. Children under 6 years of age are required by Florida law to wear a life jacket on boats less than 26 feet long. Federal law requires persons under the age of 13 to wear a life jacket when more than 9 miles off the Gulf coast, except when below deck or in an enclosed cabin.
- **Fire Extinguisher** - Required on motorboats with built in gas tanks or if constructed in a way that will allow fumes to accumulate. Always keep your fire extinguisher fully charged.
- **Sound Signaling Device** - Vessels under 39 feet must carry a whistle, horn or other attention getting device. Boats over 39 feet require both a whistle and a bell.
- **Visual Distress Signals** - Motorboats operating in coastal waters are required to have appropriate visual distress signals. For more information refer to www.myfwc.com.

****The operator of a boat (owned, rented, or borrowed) is responsible for having ALL required equipment onboard and in good working condition. Different sized vessels may require additional safety equipment.**

Contact the FWC Boating and Waterways Section at 850-488-5600 or go to www.myfwc.com/boating for more information.

ARTIFICIAL REEFS	Depth	Latitude	Longitude

13 Whale Key Reef	10'	27° 23.50'N	82° 36.25'W

Terra Ceia Aquatic Preserve

Terra Ceia Bay has been designated as one of Florida's 42 Aquatic Preserves. These exceptional estuaries and state-owned submerged lands were set aside by the Legislature to be preserved in their essentially natural or existing condition. Seagrass, mangroves, and salt marshes are biologically productive habitats that benefit from this designation. The Aquatic Preserves support a great diversity of fish, shellfish, birds, reptiles, and mammals, and are protected through resource management, research, monitoring, and education. Only through careful management can these resources be preserved for the enjoyment of future generations.

FISHING THE SEAGRASS FLATS

- Do not operate your boat in areas that are too shallow for your equipment.
- Use nautical charts and tide tables to plan your course.
- Never cut through seagrass beds with a propeller. Watch your prop wash for mud or plant life which may indicate you are too shallow. Remember prop scars take years to recover.
- Pole or use a trolling motor when traveling across or fishing on the flats. Quiet fisherman catch more fish.
- If you run aground, turn off your engine! Raise the motor and push or pole your way to deeper water. If necessary, wait for high tide to move your boat.
- Do not crowd another boat. If you see another boat fishing on the flats, do not approach unless beckoned.
- Stirred-up sediments are harmful to seafife. Always keep at least 12 inches of water under your propeller.

Special Regulated Watersport Areas
The County's Manatee Protection Ordinance designates Warners Bayou East and West as Slow Speed-Minimum Wake Zones, but under certain restrictions provides for the operation of vessels at higher speeds when engaged in watersports, if the vessel operator and vessel are permitted through the County. Please contact the Parks & Natural Resources Department at 941-748-4501 to obtain information on the County's permitting program.

Bird Sanctuaries/Beach Nesting Birds

Audubon Florida recommends the following to help nesting and migrating birds found in bird sanctuaries or other nesting locations:

- Always comply with signs and posted areas on nesting islands.
- Never let dogs or children run through a colony of nesting birds. Birds know dogs are effective predators and are highly disturbed by them.
- On beaches, stay out of posted bird nesting areas. Florida Fish and Wildlife Conservation Commission (FWC) officers will post and "string fence" active nesting colonies. Beach-nesting birds, including state-listed Least Terns, Black Skimmers, and American Oystercatchers, choose sandy beaches as nesting sites in spring and summer.
- Between April and August, gulls, terns, and skimmers may nest on unmarked beach areas. If you notice birds circling and calling over your head, you may be in a nesting colony. The nests, eggs, and even the chicks will be highly camouflaged, placed in shallow hollows or "scraps" in the sand. Watch where you step, leave quietly, and enjoy the spectacle from a distance. Contact FWC at 863-648-3200 or Audubon's Florida Coastal Islands Sanctuaries at 813-623-6826 to report nesting colony locations that have not yet been posted.
- Birds resting and feeding on sandbars and mudflats should not be disturbed. Migrating birds depend on our area's resources to provide critical food and rest stops during their long-distance trips between nesting sites in the far north and wintering locations in South America. Disturbance of birds on sandbars can interfere with normal feeding and resting behavior, reducing weight gain and the endurance needed for long journeys.
- Important bird nesting colonies are shown in this guide.

DON'T FEED FISH CARCASSES TO BIRDS

Birds like pelicans, herons, and egrets are able to easily digest the bones of small fish that are their natural prey. But the larger bones of discarded redfish, snook or other carcasses of filleted fish are dangerous to birds because rib bones and other sharp bones can puncture birds' throats, stomachs, and intestines, causing fatal peritonitis.
