

**FREIGHT
FARMS**

**FARM-TO-
HOSPITAL**

Add a farm to your property with a farming subscription service! It's easy—Freight Farms installs a temporary farm at your location, and your residents get to experience fresh and local food year-round.

YOU CALL THE SHOTS, WE GROW THE GOODS

Your monthly subscription gives you access to 400 lbs. of produce a month!

Choose from over 180 plant varieties, or partner with us to experiment with new produce options.

We'll work with you to find the perfect harvesting schedule to meet your needs.

PRODUCE WITH A PURPOSE

Café Supply

Supply your facility's cafés with greens harvested only yards away from where they're served.

Patient Meals

Provide patients with nutritious and high-quality produce to give them added vitamins and minerals during their hospital stay.

Food Security

Use a portion of your harvest for philanthropic purposes: donate to local food pantries or create a pick-up point for at-risk individuals at your facility.

Nutritional Education

Augment your nutritional education programs with fresh and readily-available produce. Serve raw or use as building block ingredients for dozens of healthy recipes.

FULL SERVICE FARMING

INSTALLATION

We install a hydroponic container farm (the Leafy Green Machine™) on your campus. At 320 sq. ft., this high production unit can fit in anywhere, and its modular design makes it easy to move!

FARMING

We manage all operations inside the farm: seeding, harvesting, cleaning, and maintenance.

Thanks to the LGM's climate control technology, we can farm year-round in all types of extreme climates.

DISTRIBUTION

We package and deliver weekly harvests according to your needs and specifications.

EDUCATION

We facilitate tours for property managers, residents, and guests.

FOOD FOR THOUGHT

Health & Wellness: Engage and inspire people to value transparency, seek out information about their foods' origins, and make healthy choices every day.

Sustainability: The LGM™ immediately shortens the food supply chain, eliminates the need for herbicides or pesticides, and uses 90% less water than conventional farming methods.

Community: Not only is the LGM sustainable, but it's a great way to add meaningful and unique amenities that connect with tenants looking to live in a green community.
