

PUBLIC HEALTH BENEFITS OF USING EVOLV EXPRESS™

Thanks to the Evolv Cortex AI™ software platform, and the ability for Evolv Express™ to instantly differentiate between weapons and personal items, venues receive a variety of public health benefits. In light of COVID-19 cautions and concerns, these benefits are important now more than ever.

LESS BODY CONTACT

Evolv Express reduces nuisance alarms by up to 85% over metal detectors. This nearly eliminates the need for secondary screening with pat downs and manual bag searches, drastically reducing human contact between visitors, employees and guards.

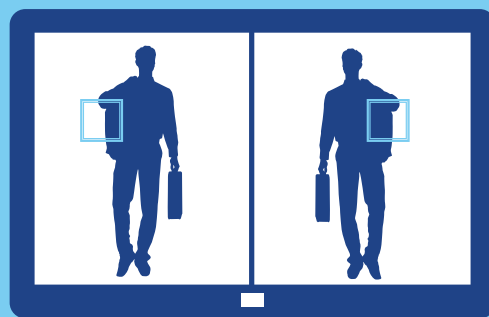

NO WAITING IN LINES

Evolv Express operates 10X faster than metal detectors ensuring visitors are no longer forced to stand in line thereby reducing large crowds and the spread of germs through 1:1 contact.

TARGETED SEARCHES

Evolv Express provides targeted image-aided alarm resolution, enabling guards to spend less time searching a person's body or bag thereby reducing the amount of physical contact with people and their belongings. This also allows venues to implement a "no touch" policy, where guards direct the person to open their own bag and remove certain items for closer inspection.

ABOUT EVOLV TECHNOLOGY

Evolv Technology, THE human security company, is dedicated to preventing terrorist attacks and mass shootings. Having screened 50 million people worldwide, Evolv's AI-based, free-flow weapons-detection systems work at the pace of life seamlessly screening more than 3,600 people per hour in an undistruptive manner preventing weapons from entering venues.
