Dear Customer: Your order contains one or more radioactive materials. Authority to regulate the procurement, possession and use of radioactives resides with the US Nuclear Regulatory Commission or with those states which have signed an agreement with the NRC to do so.

Within California, the California Code of Regulations, Title 17, Section 30191 governs general licensure, procurement, possession and use limits for radioactive materials. Under a general license, California limits possession and use by commercial firms, educational and medical institutions and government agencies to not more than 15 pounds of source material at any one time for research, development, education, commercial or operational purposes and further limits the receipt of source material to not more than 150 pounds per year.

Pertinent Federal Regulations can be found in 10CFR part 30. Contact your state and local authorities to determine what regulations apply to you. The purchaser is solely responsible for determining the applicable Federal, State and local agencies, regulations and licensure requirements, and for assuring compliance therewith.

I am the management person authorized by the purchaser to sign this statement. I hereby certify that the purchaser is licensed and qualified to procure, possess and use the radioactive materials being purchased from Spectrum Chemicals & Laboratory Products, Inc. in the quantities being purchased and for the intended use, under applicable Federal, State and local regulations.
