Durabase Advanced Cream

Durabase Advanced Cream is a robust transdermal base that provides a cosmetically elegant, dry feel to the touch. The product is scientifically designed for broad API compatibility and solubility while being able to accommodate a wide pH range.

Durabase Cream

Durabase Cream is a versatile base with an elegant texture and broad uses. The product is designed for long shelf life and temperature stability, providing a superior alternative to PLO's. Its broad API solubility and stability make it an excellent choice of a range of compounding formulations.

Lipocream Base

Lipocream Base is a heavy cream with additional emollients for moisturization of dehydrated skin. The product is scientifically designed for higher API loads and solvent concentrations, making it ideal for dermatology, pain, veterinary and sports medicine formulations.

Omnibase

Omnibase is an oil-free moisturizing base with enhanced, natural skin penetration designed to handle hydrophilic and lipophilic API's. This cream is stable with a wide range of pH, capable of holding high salts and polar compounds and providing great flexibility for compounding formulations.

HRT Cream Botanical Base

HRT Cream Botanical Base is a light weight cream that is designed for sustained skin penetrations and high lipophilic loads. This cream is formulated with natural ingredients, antioxidants, botanicals and herbal extracts, making it ideal for hormone replacement therapy.

HRT Cream Base

HRT Cream Base is a heavy cream that is formulated from natural and paraben-free ingredients. The product is specifically designed for deeper skin penetration for male and female hormone replacement therapies, with stability and potency for all hormone API's.

Niosome Cream Base

Niosome Cream Base is a technology-enhanced transdermal base, promoting more rapid and extensive transdermal absorption than traditional liposomal bases. Designed with stable emulsion to protect from API degradation. Smooth texture and less greasy than liposome bases.

Niosome Cream Heavy Base

Niosome Cream Heavy Base is a technology-enhanced transdermal base, promoting more rapid and extensive transdermal absorption than traditional liposomal bases and formulated for APIs with high molecular weight or in high concentrations, without reducing viscosity.

Niosome Hormone Cream Base

Niosome Hormone Cream Base is a technology-enhanced base designed for hormone therapy and capable of promoting absorption of hormones/active ingredients that are lipophilic, hydrophilic or amphiphilic. Hypoallergenic formulation contains no perfumes, dyes or parabens.

Niosome Hormone Cream Heavy Base

Niosome Hormone Cream Heavy Base is a technology-enhanced base designed for hormone therapy and capable of promoting absorption of hormones/active ingredients that are lipophilic, hydrophilic or amphiphilic. Hypoallergenic formulation contains no perfumes, dyes or parabens. Able to deliver high concentrations of API's, permitting low volume administration.
