

# Integrate your Legal Operations Platform with your Business Spend Management solution

## *Improve business intelligence flows – for finance and legal*

Your legal team can use Brightflag to automate invoice review against the billing guidelines you've established with your outside counsel and approve the spend. Removing this previously manual task lets your legal team spend less time on admin, drive savings, manage matters more strategically, and show business-wide impact through transparent data.

For finance departments pursuing similar efficiencies, business spend management solutions have become key to making better spending and procurement decisions.

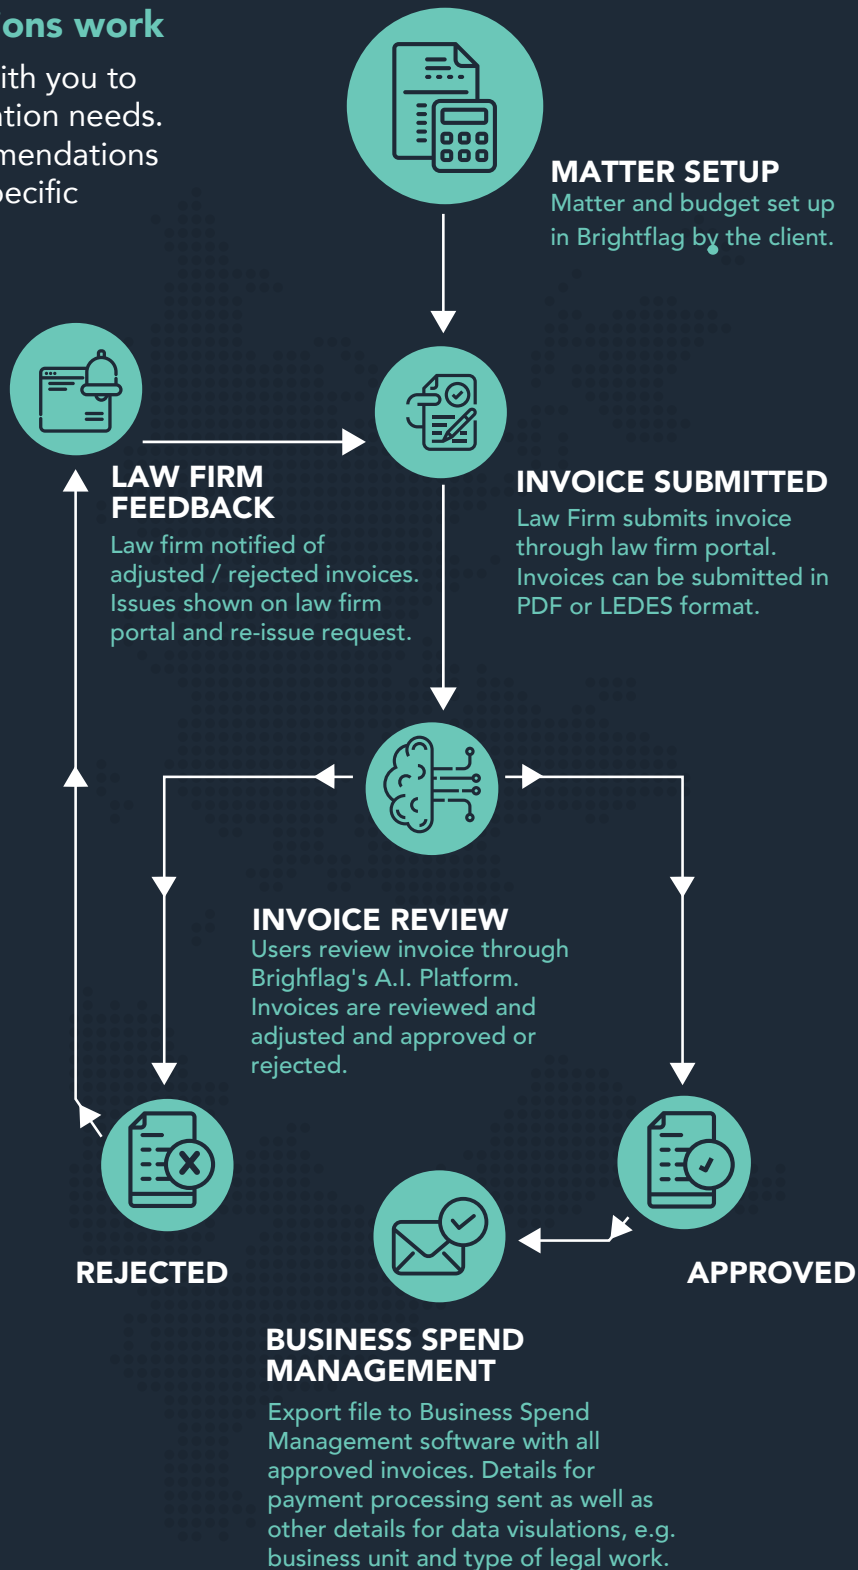

With Brightflag, you can have a bespoke, two-way integration with leading business spend management solutions. With our tailored integrations you get:

- **The holistic view.** Your business spend management solution integrates with Brightflag's A.I. powered e-billing, matter management and pricing analytics. A win-win for finance and legal.
- **Shared financials.** Your legal team gets intuitive, structured data sets for strategic business use. While finance gets the peace of mind it needs by retaining visibility over legal spend, thanks to our flexible APIs and data exchange transfers.
- **An end to silos.** Approved invoices. Budget reports. Automated accruals. You can end the manual search for spend data and stop chasing colleagues.
- **Fast law firm payment.** With our scheduled and API-based data transfer options, your law firms' uploaded invoices feed into your spend management solution – fast. Reduced payment cycles, less law firm payment queries, happier firms.
- **Automated spend and accrual reports.** Does your finance team want automated and reliable data for accruals and forecasting? No problem. You can even receive data every day if you need to.
