SPACES

The CXApp spaces solution gives businesses increased insight into the physical areas around their campus so that they can better control capacity around the workplace. The ability to set threshold and capacity limits within a real-time alerts system is strategic imperative for companies with dense on-site employee attendance and high visitor turnover.

STEP 1 View available desks, conference room, or shared spaces

STEP 2 Reserve your space for the day/time you need

STEP 3 Release your space if/when it is no longer needed

BENEFITS

- **Workplace analytics** show detailed reports on how many people will be on-site and where they will be for any given day/time of day.
- **Density management** can help you open, block, or reconfigure high traffic areas to allow for social distancing. Proactive sanitation at the end of the day is made easy by aggregated data of desks booked and desks used (sensor-based data)
- **Contact tracing** helps identify which people were in the office at the same time on the same day in the same space, based on desk usage analytics.

60+ PARTNER INTEGRATIONS

We work with existing enterprise applications to integrate multiple workflows and automate processes for a productive workplace, including:

G Suite

RELOGIX

aruba
a Hewlett Packard
Enterprise company

PLATFORM OVERVIEW

The CXApp is a mobile solution for digital customer experience programs across meetings, events, communities and campuses. Serving as a comprehensive workplace experience solution, our SaaS platform drives engagement with a mobile-first mindset across workplace operations through personalized and contextual on-site journeys.
