

Identify the right students for the right programs and improve student outcomes.

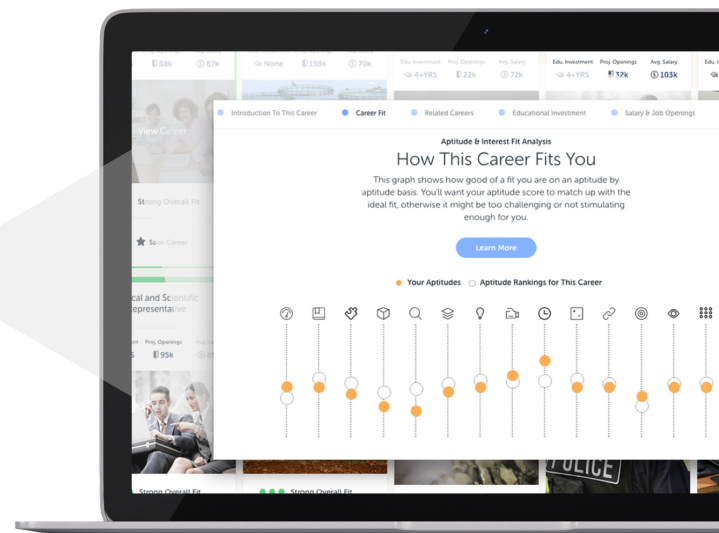

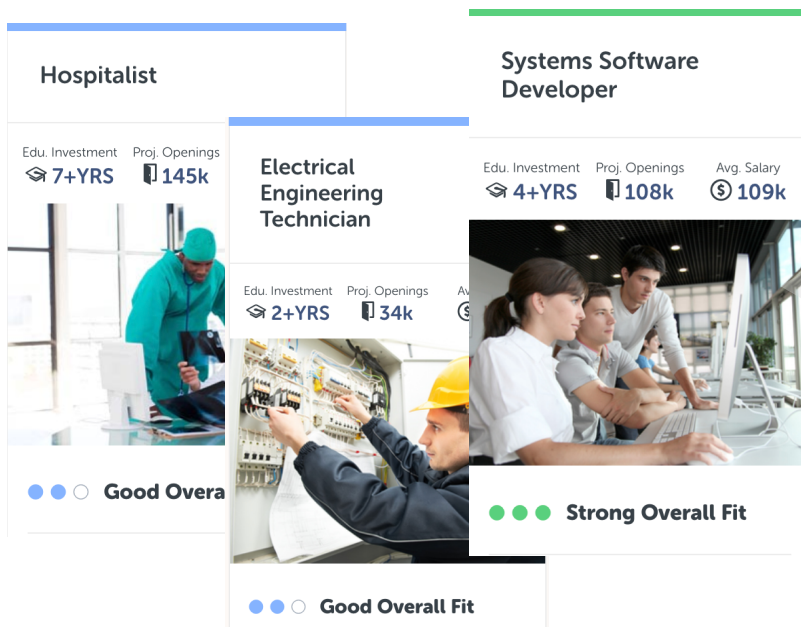

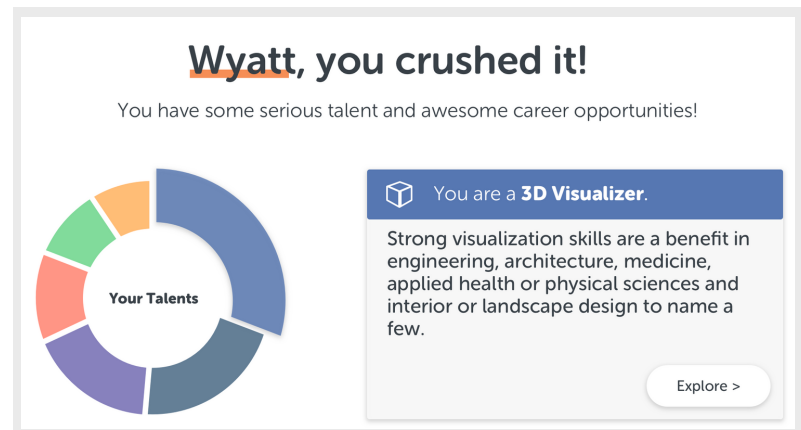

What is YouScience?

YouScience gives students hope, relevance, and direction by expanding their vision of opportunities.

Unlike traditional interest surveys, YouScience uses fun, engaging 'brain games' to capture real measures of aptitudes (natural abilities most important to career choice).

YouScience then translates those talents into real world, high-demand careers.

ALL Students Have Talent

Case Study

Clayton County Georgia School District used YouScience to help 3,203 students discover where their talents and passions meet. Teachers and counselors are now able to better guide students toward their best-fit CTE, dual-degree, and post-secondary studies. Because YouScience measures aptitudes, which go beyond standard interest surveys that are limited by student exposure, we were able to uncover the talent for high-demand, high-wage careers - across race and gender.

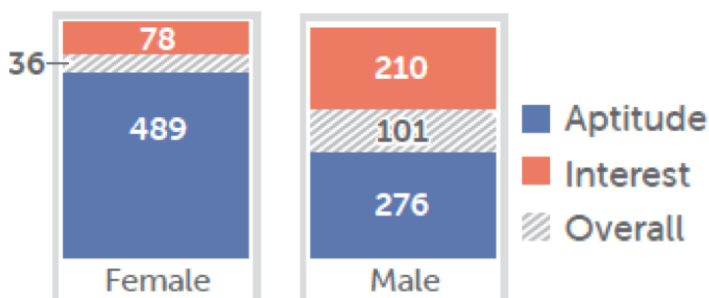

“We are using YouScience to help students make informed career and post-secondary decisions. Our effort has been critical as we determine and align resources for current and future Academic and Career Pathways.”

- Dr. Beasley, Superintendent of Schools/CEO Clayton Co. Public Schools

Interest vs. Aptitude for Careers in Manufacturing - Clayton Co. Students

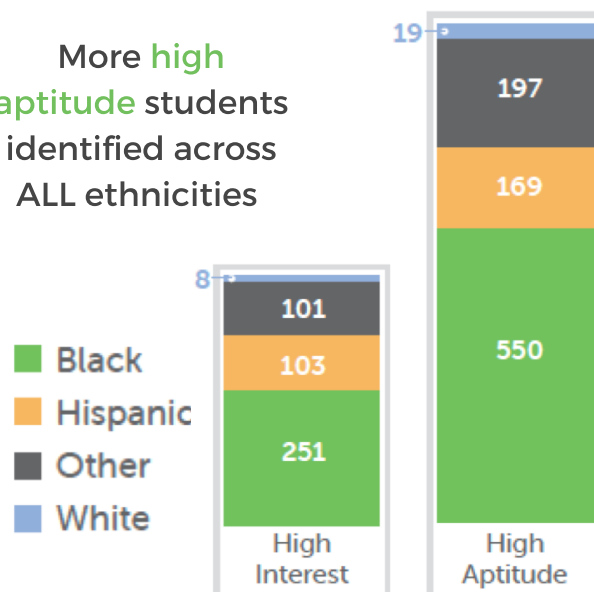

Gender

6x more female students have high aptitudes for manufacturing vs reported interest

Ethnicity

More high aptitude students identified across ALL ethnicities
