

ENHANCE YOUR WIRELESS CONNECTIVITY

NEW GRACEPORT COMPONENT (Q43)
EXTENDS YOUR NETWORK OUTSIDE
THE CABINET

NEW
P-Q43-B3RX

The GracePort® thru-door antenna extends an existing radio network to the outside of a panel using a coaxial SMA (SubMiniature version A) connector. This GracePort® 2.4GHz extended antenna enhances your panel's wireless signal reception and strength through a rugged and environmentally protected UL recognized housing.

FEATURES & BENEFITS

- Passive device that extends your panel's existing radio network to the outside of the cabinet.
- Enhance signal strength and reception when the antenna is brought outside the cabinet using a hardwired connection.
- Single antenna housed in an environmentally rated GracePort housing that protects antenna from harsh industrial contaminants and physical damage.
- Ability to connect any 2.4GHz radio network using a SMA connector.
