

CURO Connector

When transforming Human Capital Management solutions, organizations often ask if compensation management should be part of the broader HCM or talent suite. The complexity of compensation management means integrated compensation platforms often fail to be flexible enough to meet current or future process requirements.

Sitting alongside your HRIS/ERP solution our software can accommodate any level of compensation complexity through easy-to-use configuration, allowing you to leverage your existing investment in core technology but close process and functionality gaps in compensation.

We offer a series of API and SFTP integration options which allow automated data exchange between CuroEnterprise and leading HCM suites.

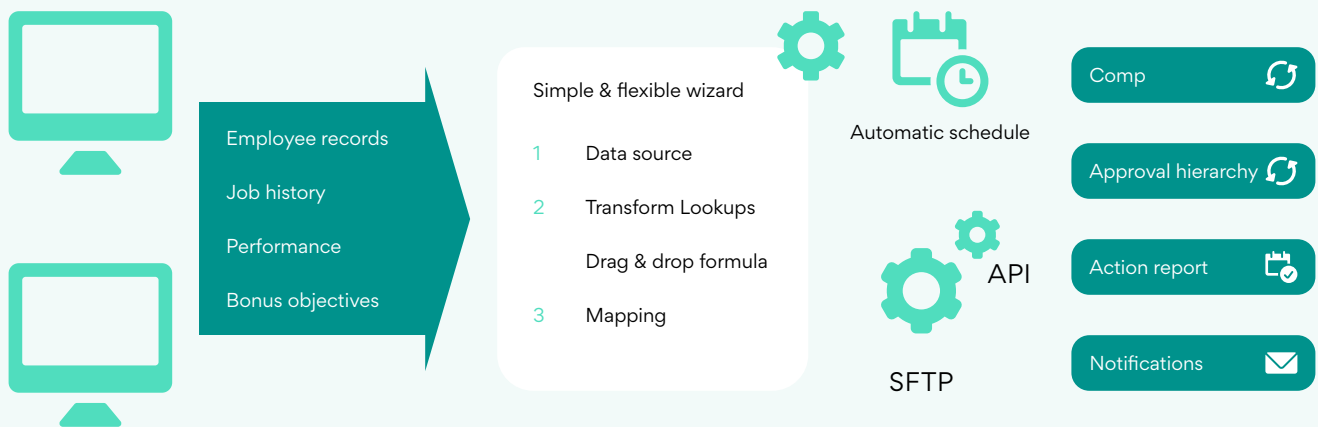

Key benefits

- API and SFTP integrations share the core importer logic, mapping and processing
- API and SFTP integrations are both configured via Curo's wizard based Importer by you or your implementation consultant
- Single or multiple integrations
- Full success and exception reporting

How it works

- Simple, wizard based setup for API or SFTP feeds, with automated data mapping
- Integrate with your core HRIS or both HRIS and talent solutions
- Decide your own schedule for data updates
- Enforced consistency of data with notification of changes and failures from errant data

Do you need more detail?

Get in touch to learn how you can leverage your existing investment in core technology and enjoy market leading compensation management solutions.

About Curo

Designed and developed by compensation experts, Curo's Compensation Management Software enables organizations to achieve the biggest impact, through compensation, to drive business performance and employee engagement while ensuring pay transparency, equity and compliance.
