Facegate®

Videokonferencing Cloud Service.

Kilchenmann

Videoconferencing Cloud Service

Whether at the office, at home or on the road. With the Facegate Videoconferencing Cloud Service you enjoy high-quality videoconferences with the device of your choice.

Infrastructure from the cloud

No investment in the basic infrastructure thanks to delivery from the cloud

Conventional videoconferencing system

Global coverage

A high level of stability is required to guarantee global coverage for calls in first-class audio and video quality. This means that video calls are particularly susceptible to fluctuations in network conditions. There are over 19 dedicated data centres on all continents that ensure this stability, guaranteeing the agreed capacity, optimum call routing between the points of presence (PoPs) and minimum latency, jitter and packet loss.

Everyone can take part

An open and interoperable service ensures that you can hold videoconferences with participants irrespective of the network, system or standard.

Participants can dial in to the conference from a standards-based video system, Microsoft Skype for Business / Lync or using MyMeeting Video App. Even with a conventional telephone a participation is possible.

Advantages of Facegate

A global address book, up to 50 participants per meeting and advantageous licensing models are only some of the advantages Facegate offers.

- **Simple**
The operation is very easy! All the elements are extremely user-friendly. The phone book is globally managed and up-to-date at all times.
- **Interoperable**
Connections to all common room systems and platforms. Your partners join free of charge via browser or App.
- **Cost effective**
No or minimal infrastructure investments, scalable costs through individual licence models.
