

A revolutionary formula for inflatable boat fabric

For over fifty years, Seaman Corporation has been the global leader in coated fabric technology, designed for use in many difficult applications, tougher environments than most boats will ever see. Seaman has also been at the forefront of developing fabric for Rescue and U.S. Military RIBs. This experience has led to the development of XR-Mariner™, the next generation of inflatable boat fabric, engineered to outperform Hypalon®.

XR-Mariner™ vs. Hypalon®

- Superior UV resistance
- Superior abrasion resistance
- Superior tear resistance
- Superior puncture resistance
- Can be glued or welded

THE NEXT WAVE IN INFLATABLE BOAT FABRIC TECHNOLOGY

Designed to look better longer than Hypalon®

The exclusive XR-Mariner™ formula, crafted with DuPont™ Elvaloy®, provides superior resistance to UV rays. Therefore, our white as well as colored fabrics will better retain their attractive like-new appearance. This unique formula, coupled with our high strength proprietary base fabric, results in a product with superior abrasion, tear and puncture resistance. As an added advantage, XR-Mariner™ can be glued or welded to ensure long-term airtightness.
