

Temporary Roof Membrane

Don't Get Caught in the Storm

FiberTite® Roofing Systems
FiberTite® Emergency Preparation

FiberTite® Blue Roof™ Temporary Roof Membrane is designed for use as a semi-permanent membrane for roofing repairs until permanent repairs can be made.

- Ideal for the following roofing types: flat commercial, industrial, sloped
- Can be used as a temporary roof for tear-off areas during new construction
- UV resistant performance up to 1 year
- Abrasion, tear and puncture resistant
- Available in 100" wide x 100' rolls

The coating on the roof membrane provides UV resistant performance up to 1 year, and abrasion resistance. The fabric reinforcement provides both tear and puncture resistance.

This fabric reinforced thermoplastic roof membrane can be made watertight by conventional commercial hot-air welding. Temporary seaming and sealing methods may include the use of FiberTite FTR-101 General Purpose Sealant, waterproofing caulk sealants, or adhesive tapes including Duct-Tape.
