

# Planning for Installation in Inclement Weather

FEBRUARY 2011

INSTALLATION TIP

Construction scheduling delays can easily push a roofing project planned for a fall installation into the bitter winter months. When this happens, it is prudent to revisit the construction plan. Materials, methods of installation and productivity rates can be affected by the changing weather. As an example, adhesives require special storage and application when temperatures fall below a certain point. The design of the roof system may even need to be altered.

If your project gets pushed into a time frame when weather is unfavorable, meet with your supplier and your customer. Double check to be sure the original roof system and materials will still offer the customer the best performance.

*For more information about FiberTite Roof Systems, please call Seaman Corporation at 800-927-8578, ext. 5953 and ask for Art Marangi or send an email to [amarangi@seamancorp.com](mailto:amarangi@seamancorp.com).*
