FiberTite pre-molded and sheet form non-reinforced accessories complement the flashing needs of FiberTite Roofing Systems.

**DESCRIPTION**

These flashing components are manufactured from Seaman Corporation’s proprietary compound, utilizing DuPont’s™ Elvaloy® KEE (Ketone Ethylene Ester) compound as the principle polymer.

Pre molded KEE pipe flashings are injection molded and designed to accommodate cylindrical penetrations from 1-in up to 6-in in diameter.

Pre-molded universal inside/outside corner flashings are injection molded and designed to accommodate 90° inside or outside wall, curb and other rectangular penetration corners.

The use of pre-molded pipe and corner flashings significantly improves installation consistency and reduces field labor.

60-mil, non-reinforced KEE membrane is used for roofing applications where the pre-molded components do not accommodate the penetration.

**APPLICATION**

Seaman Corporation’s FiberTite accessory components are formed and/or sealed in place using conventional hot-air welding techniques. Consult the most current versions of FiberTite Guide Specifications for the Installation of FiberTite Roofing Systems and Installation Details for installation requirements, cautions and parameters.
