

EnergyBin Launches New Website for New Year

1/8/2018

EnergyBin, the wholesale solar B2B exchange, is kicking off the new year with a new website and Resources page. Learn how EnergyBin can help your solar company accomplish your solar equipment buy-sell needs, reduce your supply chain costs, and ensure you receive wholesale solar deals at 20-70% below retail cost.

The new website offers information specific to solar brokers, solar suppliers & manufacturers, commercial & industrial solar contractors, and residential solar installers. Visitors have the option of requesting a free trial of the platform on the website home page.

In addition, a new Resources page on the company's website features material on solar equipment brokering. The resources are useful tools for full-time solar brokers, solar companies who want to adopt broker best practices, brokers from other industries interested in expanding into the solar industry, and individuals interested in learning more about equipment brokering.

The information presented is based on industry research and over fifteen years of company experience working with more than 13,000 equipment brokers. Resources explore topics of why the solar industry needs equipment brokering, common characteristics and skills of equipment brokers, buying and selling solar equipment, and how brokers are using online B2B exchanges to reduce solar soft costs and increase profit margins.
