Substitute Generic Product

This medication has a generic substitution available: Benzonatate (oral - capsule)

To select this substitution, click Switch to Generic below.

If you would like to continue to use your branded product, you can choose No Substitutions or Allow Substitutions.

Switch to Generic

No Substitutions

Allow Substitutions

Add Prescription

Add Patient Reported

- For named medications you may get a notification to substitute for generic.
- Consider using the switch to generic option as that is usually the lowest cost option
 - If you choose Allow Substitutions, you will need to click Save Prescription again

Formulary Status

- Use the internal list of medications and add your own.
- While on the Add Prescription page, click the “Save As Favorite” star icon and confirm highlighted in orange
- To continue click “Save Prescription”.

Adding Your Own Favorites

The screenshot shows the DoseSpot web application interface. At the top, the 'dose spot' logo is visible. Below it, a navigation bar includes 'Welcome Beverly Crusher' and '0 Provider Notifications'. The main content area is titled 'First Stop Health' and displays patient information for 'Jenny Smith, Unknown, 30 y'. A modal dialog box titled 'Add Favorite' is centered on the screen. The dialog box contains the text 'Please enter a nickname for this to be added to your Favorites List:' followed by a text input field. Below the input field are 'OK' and 'Cancel' buttons. A red arrow points from the input field to the list of favorites in the adjacent text. The background form, 'Add Prescription', is partially visible and includes fields for 'Current medication: Tessalon Perles (oral - capsule)', 'Current strength: 100 mg', 'Effective Date' (06/01/2020), 'Patient Directions*' (take 3 times per day, or as needed), and 'Dispense*' (9). It also has buttons for 'Change', 'Today', 'Save As Favorite', and 'Save Prescription'.

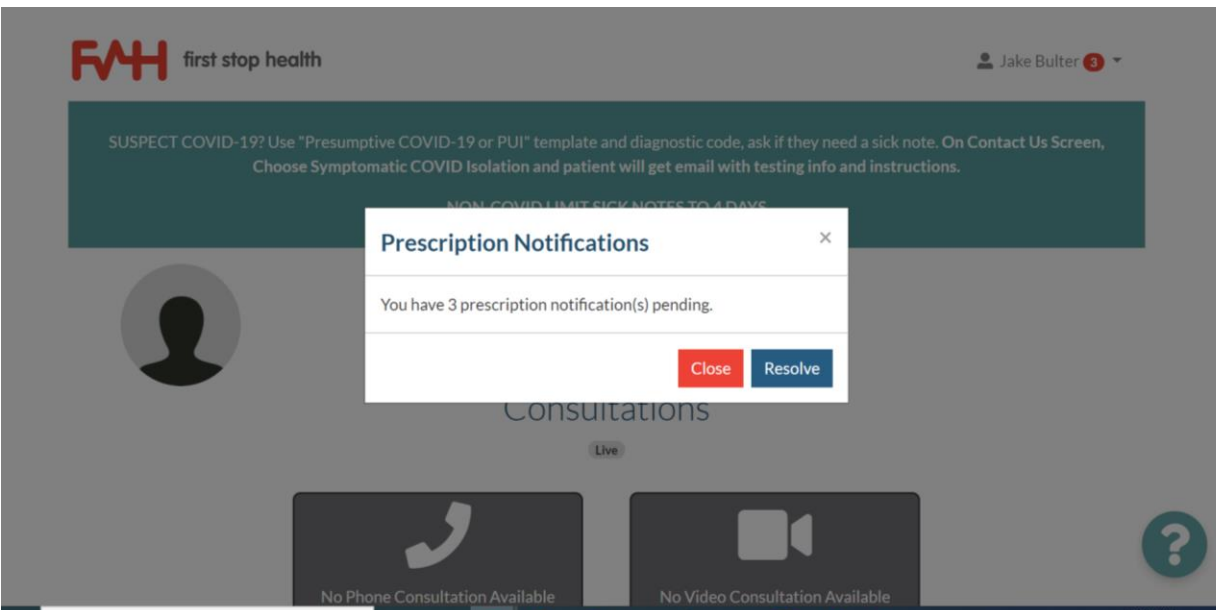

- Enter a nickname to reference on your list.
- Your favorites will be included under “My Favorites” along with the pre-entered favorites.
- It’s best to start the name with an “A” and then your initials so it will show at the top of the list and be easily distinguished from our list.

Notifications

- You may receive a text or dashboard alert if a prescription is unsuccessful.
- This happens for one of two reasons.
- Transmission Error: due to a technical issue the consult was not communicated electronically to the pharmacy.
This should be a rare occurrence.
- Pending Prescriptions: This alert occurs if you forget to click approve and send on the medication screen.

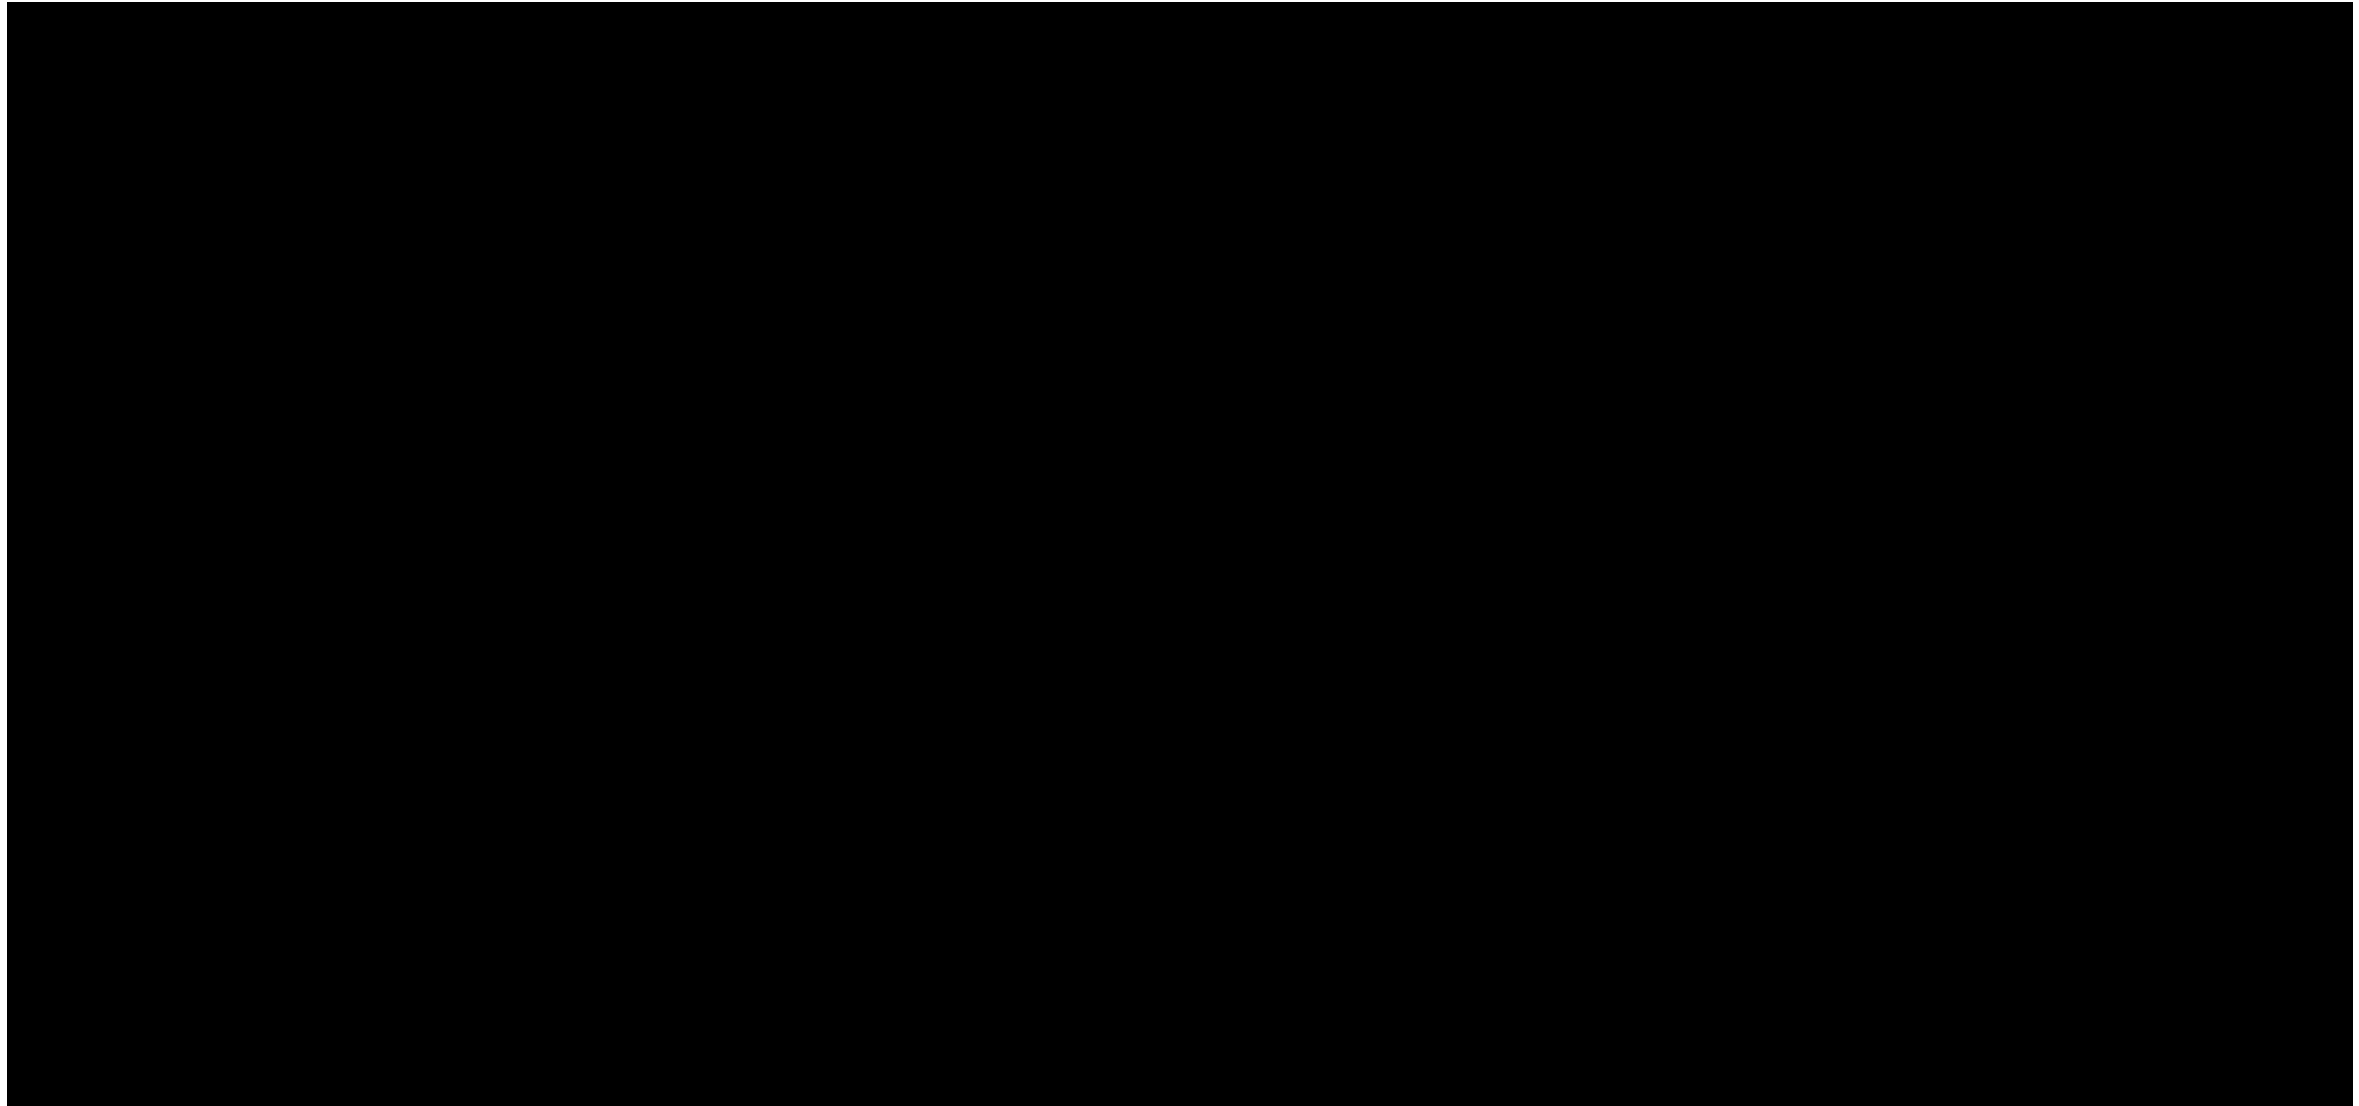

Notifications

- When you login to the platform a pop-up alert will display. You will also receive a text alert.
- You can click “Resolve” on the pop up alert to enter DoseSpot.
- Once there you can approve and send or requeue in the instance of a transmission error.

Q&A

From 1st Webinar:

Q: Is medication information for the patient still available in DoseSpot from the FSH platform?

A: Yes all patient information sync's to DoseSpot.

Q: Do we have to wait for the green status to show before moving on?

A: No, you can close the window and move on once the med shows under active medications.

Thank You!
