DESK TRACKER SERVICES

INFORM | FIND | BOOK

A quick and effortless way to find, monitor & display users, assets, occupancy and air quality in real time & to book spaces

In metropolitan areas workstations cost up to €10,000 per year for rent, inventory and operations. But the typical office utilization rate is just 39%. Gain accurate insights about how your space is being used and what savings potential you have.
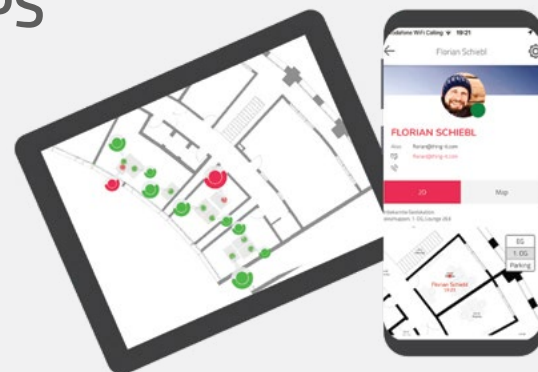

1 | DESK MAPS

Track & display status and availability of rooms and desks

Communicate live data on touchpads and mobile devices to users about vacant spaces, desks and air quality in the building to increase their productivity & well-being

2 | USER / ASSET LOCATION MAPS

Find & display location of own position, other users and assets in floorplan
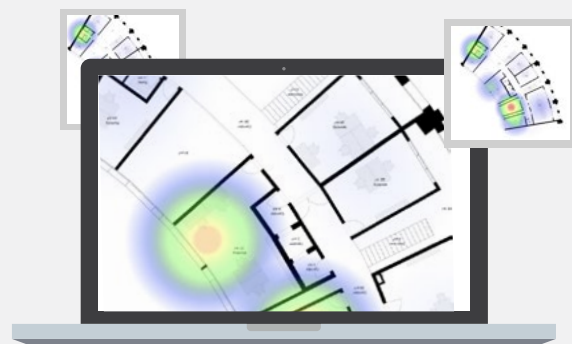

Allow users with 1 click in the mobile app to share position or to get invisible. Make way finding easy to free desks, other co-workers or required assets like projectors, flipcharts, technical equipment etc

3 | HEAT MAPS

Track & display occupancy hotspots & temperature hotzones

Drive thoughtful decisions about how to use space more efficiently by monitoring & analyzing anonymous historical sensor data centrally via dashboards to identify underused or high-usage areas.

4 | CENTRAL DISPLAY MANAGEMENT

Allocate & display live local booking data on dedicated displays

Choose your layout & create your own dashboards. Manage and allocate data to your installed displays easily from a central cloud portal with full Digital Signage functionality.
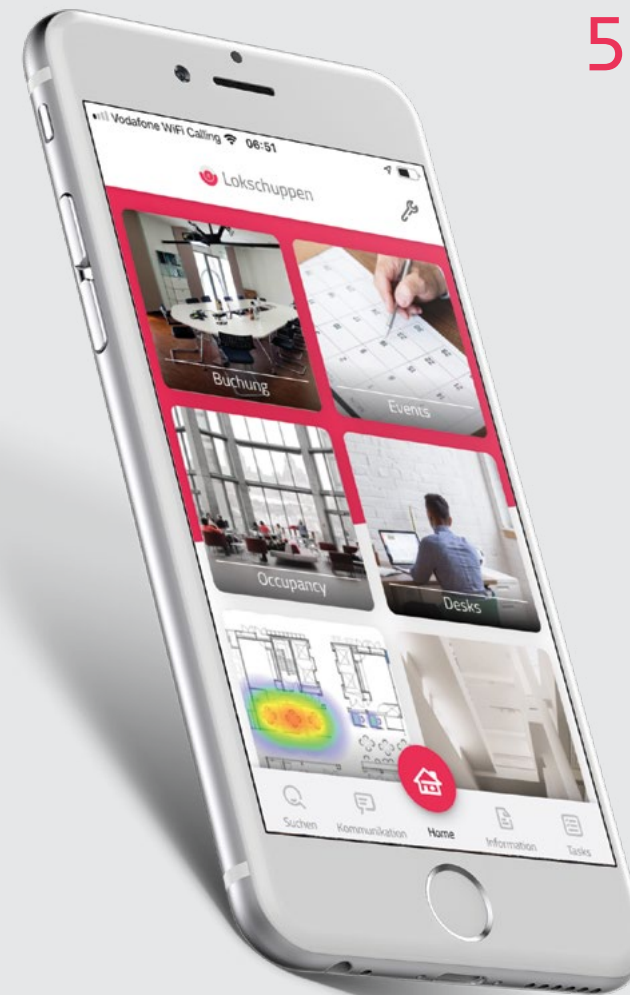

OPTIONALLY INCLUDE A MOBILE APP FOR:

5 | BOOKING

A customizable mobile app enables location based 1-click-booking of free desks based on real-time data or utilizes integrated, common calendar functions from **Office 365** to add free spaces to calendar invitations

The Thing-it mobile app can provide all essential location based building or company information, live status data and important notifications to your users.

It's an intuitive tool for easy-to-use booking of desks and way finding to booked spaces, required assets or other team members.
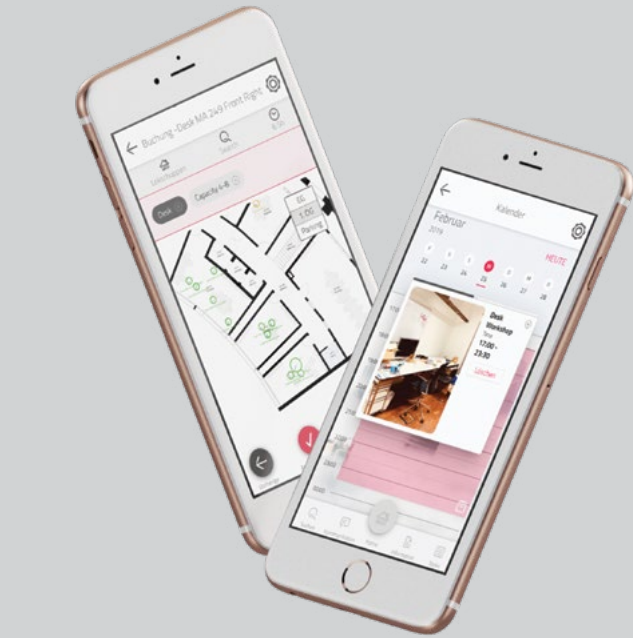

Work patterns are changing. Companies are offering more flexibility to their workforce. Workers now spend less time at their desks and more time moving around. According to a large poll in 2016 of indeed.com, flexible working models have become an important decision criteria for +75% of German employees when choosing a job.

Understand your workers varying work patterns & respond quickly to their changing needs

Geo Location

Locate your position in the office map by activating „show position" with 1 click. In that way it's easy to discover the best way to booked desks or roomsas well as to other team mates
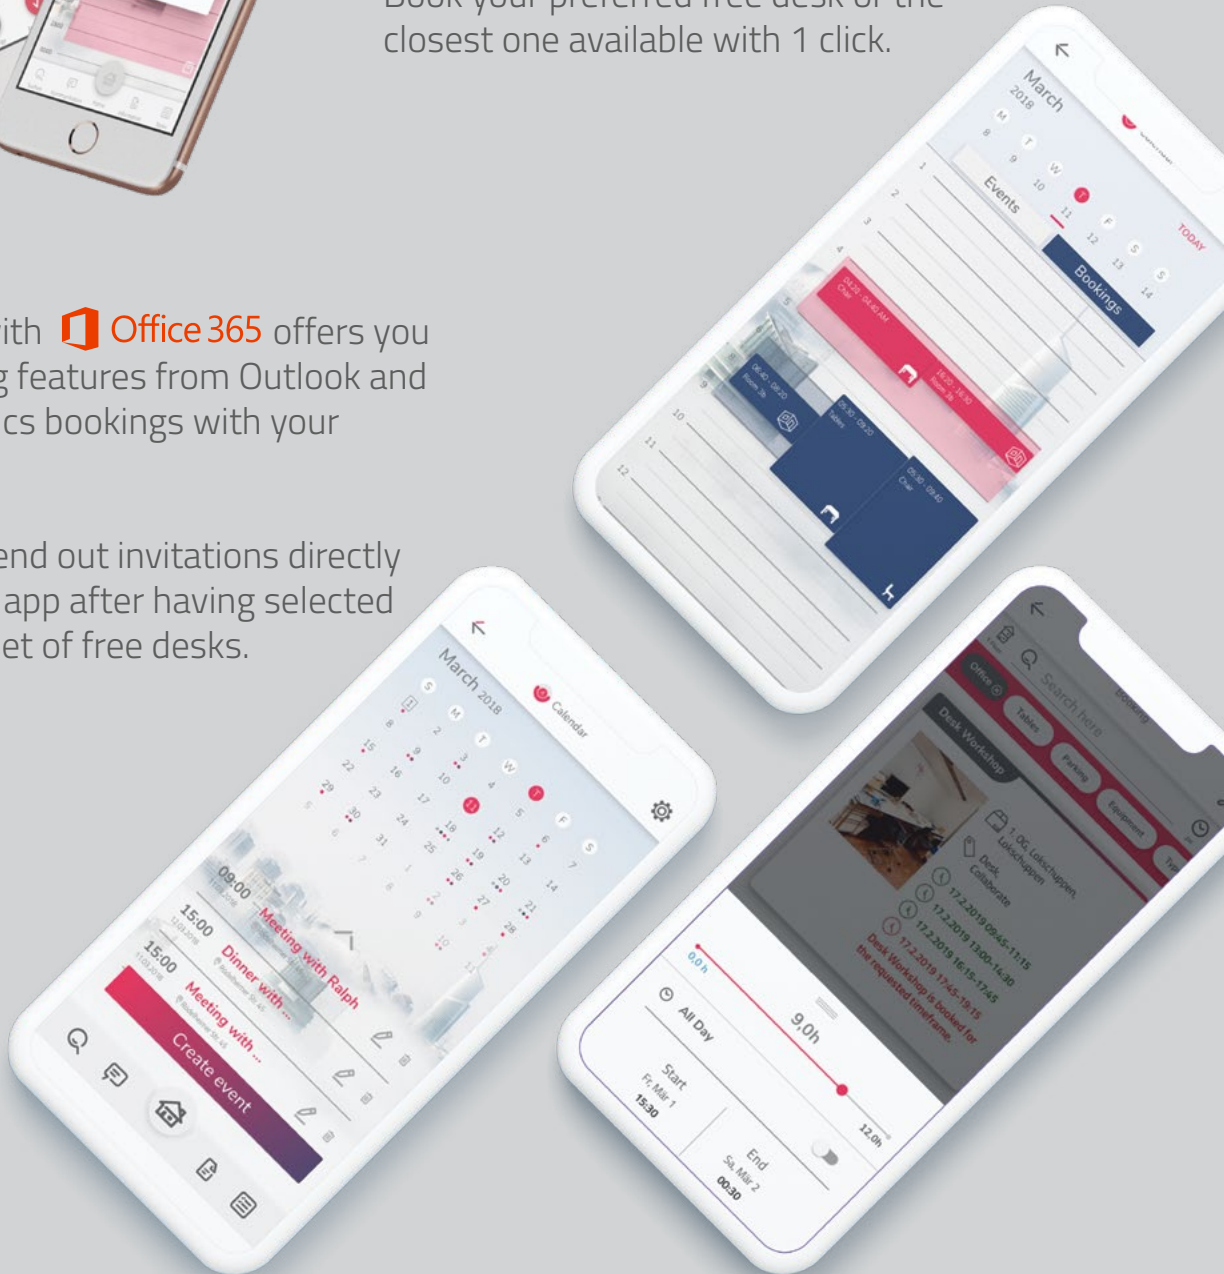

Filtering

Discover free desks & available room information with easy-to-use filtering.

Book your preferred free desk or the closest one available with 1 click.

Outlook

The integration with ![Office 365] Office 365 offers you all known booking features from Outlook and automatically syncs bookings with your calendar.

It allows you to send out invitations directly from your mobile app after having selected a free room or a set of free desks.

Thing it
everything. smart.

The cloud-based Thing-it platform enables a central, easy to use control system for smart spaces. Thing-it is a self-sufficient, self-learning "brain" that can connect all installed and planned sensors and beacons into one central management portal to match status sensor data with location based services & information.

It centrally orchestrates useful space information on web displays & mobile apps and allows historical analytics on space usage.

Our intuitive mobile app for iOS and Android provides necessary information and tools into users' hands.

DISRUPTIVE
TECHNOLOGIES

DISRUPTIVE TECHNOLOGIES develops the world' smallest IoT sensors designed for digital trans-formation which can get easily stuck everywhere needed in the building. For desk occupancy you simply stick the sensors under the desk. It's so easy that you can do it on your own. Install 100+ sensors in just one hour.

Sensors constantly monitor, collect and aggregate temperature, proximity and movement data at extraordinary range, even in harsh conditions and delivers the data securely to our partners' analytics programs in the cloud every 7 minutes.

20x20x2mm

HOW TO GET IT

1. Go to www.thing-it.com/desk_tracker
2. Register yourself with your details & fill-out your space profile
3. Complete the order of the Desk Tracker Service and related hardware
4. Upload your floorplans into Thing-it portal
5. Receive an invitation from Thing-it portal that your space mesh is ready to use
6. Receive your ordered hardware from Disruptive Technologies
7. Insert your Disruptive Technologies ID into the Thing-it portal, all your sensor ID's get automatically registered
8. Plug in the delivered gateway, move from desk to desk to stick your sensors, press on each and allocate it in your digital floorplan with simple drag&drop on the Thing-it portal. At the end your mesh is ready to use
9. Configure your heatmaps & dashboards and distribute your live data to your mounted displays locally
10. Invite your users to download your Thing-it mobile app with a notification from the Thing-it portal

Service Fees

One-time Set-up   € 2.450,00

Annual Site Fee upfront:
(including gateway & sensors)

SMALL   € 1.349,00
(<30 sensors & desks)
