DATRIX Professional Services

Network Audit & Healthcheck

As an organisation evolves, so should its IT and communications infrastructure. Over time, new people, processes and technologies are introduced that may place a strain on existing systems or render them obsolete.

"Incompatible or unsupported infrastructure components can have a negative impact on process efficiency and user experience. Ultimately, these could lead to unnecessary risk or systems failure."

Audit Services from Datrix

A network audit from Datrix will help you establish if your technology estate is still fit for purpose and capable of supporting current or future organisational objectives. It is designed to establish an accurate picture of the current state of an organisation's infrastructure; including:

Validate

› The network has been designed and implemented according to industry best practices

› Device configurations follow best practices

› Firmware versions are current and consistent through device families

› Documentation is up-to-date, complete, and accurately describes the 'as is' design

Identify

› Devices that have been declared end of sale and/or end of support

› Performance bottlenecks that are putting a drain on the business and reducing productivity

The audit is carried out either remotely or on-premises by a team of Datrix consultants. Detail is important at this stage as the results of the audit will be used to inform any future state planning.
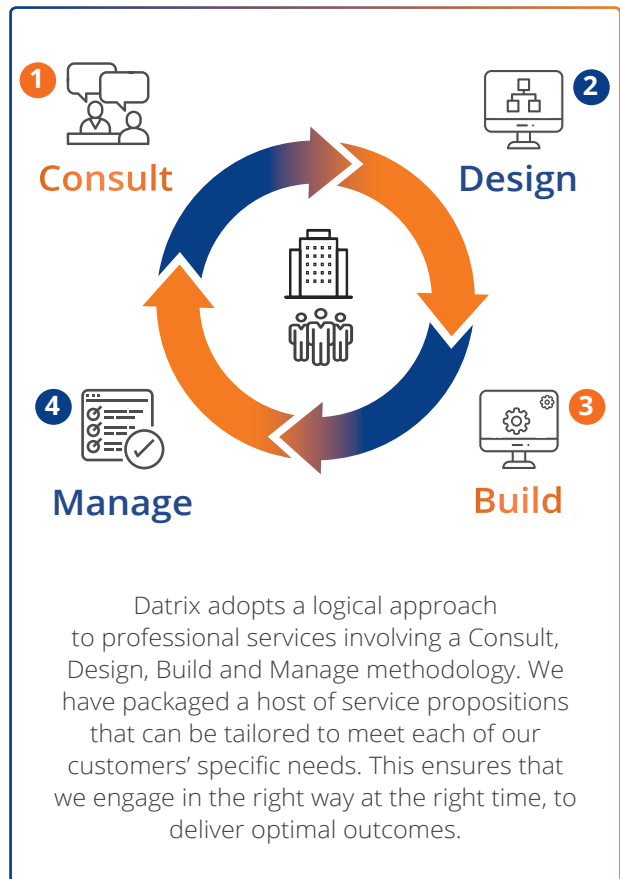

Business Benefits

› Optimise network performance by validating existing infrastructure against industry best practice

› Compile a comprehensive overview of your infrastructure estate

› Identify legacy or out of date components that are not fit-for-purpose

› Identify design flaws or bottlenecks that may be affecting performance

› Outline remedial actions and highlight elements incompatible with business objectives.

› Determine if services are ready for migration to the cloud

Recommendations Report

Post-audit, we produce a comprehensive report, detailing a RAG status of your existing estate. The interpretive report will include recommendations for remediation or optimisation, plus a roadmap to an agreed and desirable future state.

One of the core outcomes of an audit is a validation of the supportability of your existing network infrastructure. Any recommendations will be aligned to your stated business objectives and will come with an effort estimate, that can follow as a project engagement.

1 Consult

2 Design

3 Build

4 Manage

Datrix adopts a logical approach to professional services involving a Consult, Design, Build and Manage methodology. We have packaged a host of service propositions that can be tailored to meet each of our customers' specific needs. This ensures that we engage in the right way at the right time, to deliver optimal outcomes.

Datrix is a leading **Smart Infrastructure** and **Cyber Security** Solutions provider.

Established for over 25 years, digital transformation is the driving force behind the evolution of Datrix services and solutions. Our professional and technical services teams adopt a consultative, client-centric approach that sees us design, build and manage superior solutions.

Our critical networking, communications and cyber security solutions are the preferred choice for the nation's key institutions as well as public and private sector organisations seeking to address the business challenges of compliance, performance, availability and affordability.
