Enterprise Security Management with CAS Severn, Inc.

Securing your corporate enterprise is a critical aspect of your business. Especially protecting your valuable corporate information and systems. This is where CAS Severn comes in. Our specialists can work with your IT management team to devise a plan and implement security solutions for your infrastructure, systems, and applications.

Unfortunately, we hear more and more about the problems facing organizations with regards to lack of sufficient infrastructure security. From losing unencrypted tapes to stories about the wrong people accessing sensitive data, these issues are on the rise. Don't let these things happen to you.

Create a strategy and implement a solution that won't cause you to

lose sleep at night. Here are the many areas within security management where we are experienced:

- Network Vulnerability Assessments
- Network Security Strategies
- Penetration Testing
- Single Sign-on Solutions
- Strategic Security Consulting
- User Access Management
- User Identity Management
- Virtual Chief Information Security Officer (VCISO)

Don't be the next organization mentioned in the news being referenced for losing critical information that wasn't secured and protected. This is not only painful to the ego but can take years to recover from reputation wise and operationally.
