## System and Storage Management with CAS Severn, Inc.

Are you being pressured to simultaneously reduce IT spending and meet increasing demands for information storage and system management?

You may be saddled with technologies that don't work with each other or you're limited by outmoded legacy systems.

System and storage management is a major component of optimizing your existing IT infrastructure, whether by consolidation, automation, upgrades, outsourcing or virtualization. Optimizing means making what you have work better for you.

Businesses today are faced with the challenge of limited IT budgets, disparate systems and the need to keep business critical applications

available at all times. Often the IT infrastructure would be adequate if only resources could be used more efficiently.

CAS Severn's system and storage management experts can help make the most of your existing infrastructure without blowing your budget.

Here are our many areas of expertise within System and Storage Management:

- Server Consolidation and Virtualization
- Storage Consolidation and Virtualization
- High Availability & Clustering
- Data Backup and Recovery Management
- Network and Directory / Service Design / Implementation
- Enterprise Systems Management
