

CASecure Managed Services Hosted Patch Management

Hosted Patch Management requires no additional resources within a client's infrastructure and has a 24-hour deployment cycle.

This offering provides full OS patching across Windows, Linux, Unix, AIX, MAC, and others. The services include third-party application patches such as Adobe, Java, Apple, Microsoft, Google, Skype, and more.

CASecure combines an industry-leading solution with senior security engineers to provide an advanced endpoint management offering.

The service provides:

- Need for no new infrastructure.
- Full solution deployment within 24hrs.
- Support for over 90 types of OS including, Windows, Unix, MAC, and many others.
- Third party patching for applications.
- Full visibility of endpoints ANYTIME, ANYWHERE including off-premise devices.
- Web portal access for reporting 24/7..
- Monthly patch deployments.

The service values are:

- Free-up full-time employees to focus on priority projects.
- Eliminate hardware & software costs for in-house solution(s).
- Monitor endpoints continuously to identify possible issues.
- Provide real-time reporting on patch compliance.
- Assure over 95% successful first pass patch deployments.

CASecure security personnel work directly with the client's IT professionals to ensure that all the benefits of the managed service are realized which includes return on investment.
