CAS Severn * Monitoring

Immediate time to value for more insightful infrastructure performance management.

Infrastructure Performance Monitoring

POWERED BY **GALILEO** Performance Explorer ®

Eliminate doubts of where problems lie, how resources can best be utilized, and what future hardware purchases are justified. Enterprise monitoring solutions from CAS Severn are easy to deploy, simple to use, and offer quick optimization of your server and storage hardware and virtualization environments. Hundreds of visual charts and metrics deliver analytical perspectives to ensure optimal performance of physical and virtual servers and storage. Built on a SaaS architecture, our solution installs in minutes without onsite data or hardware requirements.

Enterprise alerting enhances insight
Enterprise Alerting is available across the entire monitoring suite and interfaces with health check and enterprise at-a-glance GUI dashboards to provide IT organizations with unprecedented alert monitoring capabilities. Alerting dashboards are utilized to monitor the health across the IT datacenter, from operating system (OS) problems to storage array concerns.

Predictive planning, not reactive alarms
CAS Severn*Monitoring provides deeper insight into server and storage performance than any other tool. That means more analytical capabilities for pre-emptive system management, so you can be more efficient in utilizing existing resources and more accurate at predicting and planning for future capacity needs.

Cloud-based monitoring built for on-demand flexibility
Built on SaaS architecture, our solution provides flexibility without the overhead of an onsite appliance or server—enabling users to collect and analyze their customized performance data more efficiently, via a secure Internet connection.

Improve decision-making while you control costs:
- Capacity planning and IT budgeting
- Exploiting virtualization technology for optimum benefit
- Managing IT functions to support business objectives
- Avoiding disruption of business-critical applications due to system overload
- Minimizing unnecessary purchases and underutilization of hardware
