

Data Protection Managed Services

powered by

PREDATAR

CAS Severn*DataProtect Managed Services is a value-driven offering for demanding data protection workloads, and is designed for organizations that understand cloud economics.

CAS Severn*DataProtect adds service management automation and orchestration to IBM Spectrum Protect software.

CAS Severn*DataProtect enables differentiated hybrid cloud data protection by combining the flexibility of public cloud with the security of local control.

CAS Severn*DataProtect integrates backup and recovery into an organization's core services tools and processes. Our service monitors system health and automates operational support activities.

CAS Severn*DataProtect is a subscription-based service with usage-based monthly billing and no upfront costs or asset management.

The services will:

- Increase Productivity
- Reduce Costs
- Leverage Cloud Economics
- Improve Control
- Reduce Risk

CAS Severn*DataProtect experts will work directly with your IT professionals to ensure that you receive all the benefits that our service provides, including realizing the return on your investments.
