

Security Risk in Government is a Top Priority

The “cloud first” initiative was developed as a means to help Federal agencies accelerate the adoption of cloud technologies to transform, modernize and upgrade IT technologies and functions. Security and privacy concerns continue to hamper the speed of cloud adoption by Federal agencies. A recent survey revealed that 87% of agencies are afraid to move their critical assets to the cloud because of security and privacy concerns.

Fugue, a cloud infrastructure automation and security solution, helps to eliminate cloud risks and provide the necessary controls to overcome many of the privacy and security concerns for a secure and compliant infrastructure. Fugue helps Federal agencies stay compliant with regulatory and internal policies, alleviate the risks of data leaks by validating security and access policies, and easily show proof of compliance during audits.

Stay Compliant

Having non-compliant business practices can be costly. Fugue’s automated remediation feature reverts all unauthorized changes back to its original state ensuring that the infrastructure is always in compliance.

87% of government agencies in the United States are afraid to move their critical assets to the cloud because of security and privacy concerns.

Validate Security and Access Policies

Unauthorized access and account hijacking remain major concerns for Federal agencies as they adopt cloud technologies. Fugue prevents unauthorized access by strictly enforcing access policies. Fugue's RBAC feature prohibits unspecified configurations changes to cloud infrastructure. By design, approved users are only permitted to make defined changes.

Other security measures to protect against unauthorized access include enforcement of a number of password policies including minimum password complexity, prohibiting password reuse for a certain number of generations, and disabling passwords after an inactivity period. Fugue also verifies that users have enabled multi-factor authentication for accessing cloud infrastructure services.

Easy Audit Tracking

Audits and proof of compliance can be time consuming. Auditing of infrastructure changes is made simple with a centralized view of all audit records from aggregated sources. Fugue provides detailed records of changes to cloud infrastructure for audits and accountability.

Supporting Your Agency's Core Mission

Security remains one of the most significant obstacle standing between federal agencies and a broader migration to cloud technologies. Fugue provides federal agencies a powerful automation solution to leverage all the benefits of the cloud while providing a secure, compliant infrastructure. Automated remediation reverts all security and policy violations back to a good known state as soon as they occur. There are no alerts to overwhelm the DevSecOps team, thus, allowing them to focus on agency's core mission whether that is to deliver more timely services to citizens, increase efficiency and lessen the burdens on internal IT resources or innovate and reduce time to ATO. Fugue helps to ensure that your infrastructure is secure and compliant while you focus on your core mission!

To learn more about Fugue's Kick Starter Program and how it can help federal agencies decrease time to ATO, please contact fed@fugue.co for more details.
