All data centers hold ISO 27001:2013 and SOC 2 Type 2 certifications. In addition, the data centers are certified under the Privacy Shield Frameworks. A perimeter of multiple security controls are in place for all data centers which include multiple require authentication methods in order to gain access.
2.	Please describe the admission control measures taken in your company to prevent Processing systems from being used without authorization.	Authorized users are based on business requirements and require management role identification and approval. Time out features, strong authentication requirements and access rights are implemented and trackable.
3.	Please describe the access control (virtual) measures taken in your company to ensure that persons entitled to use a Processing system have access only to Personal Data to which they have a right of access, and that Personal Data cannot be read, copied, modified or removed without authorizations in the course of Processing or use and after storage.	Authorized user access is managed through a formal registration and de-registration procedure for granting and revoking access to all systems and services based on job role. Audit reporting allows for the accurate monitoring of user activity and access controls are in place to protect data integrity and confidentiality.
4.	Describe the transmission control measures taken in your company to ensure that Personal Data cannot be read, copied, modified or removed without authorization during electronic transmission or transport, and that it is possible to check and establish to which bodies the transfer of Personal Data by means of data transmission facilities is envisaged.	Processor has removable media policy with the appropriate technical controls in place to protect data integrity and confidentiality and prohibit unauthorized Personal Data transfer. Remote access is controlled using multifactor authentication. Data is encrypted at rest and in-transit using government approved encryption technologies.

5.	Describe the measures of input control to ensure that it is possible to check and establish whether and by whom Personal Data have been entered into Processing systems, modified or removed.	Processor is agnostic to the data the client chooses to upload. All user actions with respect to data integrity and confidentiality are tracked and reportable. Controller has sole determination on what data is provided to Processor.
6.	Describe the assignment control measures in your company to ensure that, in the case of commissioned Processing, the Personal Data are Processed strictly in accordance with the instructions.	Audits are conducted annually as part of ISO 27001 Certification and SOC 2 Type 2 Report to ensure compliance requirements are being met. Authorized users complete Training and acknowledge compliance with company code of conduct and policies annually. All employees and contractors are required to sign NDA.
7.	Describe the availability control measures your company takes to ensure that Personal Data are protected from accidental destruction or loss.	Processor has redundancy with each platform and maintains logs of system availability. In addition, redundancy allows for continuous system backups. Processor has Disaster Recovery and Business Continuity Plans that are reviewed, updated and tested annually.
8.	Describe the separation control measures your company has taken to ensure that Personal Data collected for different purposes can be Processed separately.	Logical separation is maintained within the same multi-tenant database. Authorized users are restricted to the project to which they are authenticated. Processor maintains a 3-tiered application with separation of data; development, test and production
