

## Who is M2GEN?

M2GEN is an oncology-focused health informatics solutions company with the mission to help patients gain access to the best treatments by leveraging clinical and molecular data to accelerate the discovery, development and delivery of tailored and more personalized therapies. M2GEN's approach is to integrate clinical and molecular data from cancer patients who consent to an observational study called Total Cancer Care (TCC) Protocol. Patients donate their clinical data and specimens throughout their lifetime leading to new biomarker discovery, clinical trial matching, and population studies examining comparative treatment effectiveness. Creating in silico communities based on genotype and phenotype forms the basis for deep learning and pattern recognition to predict events.

## We're searching for a Web Developer

This position is responsible for the design and development of web systems, including intranet and extranets, client server and distributed software applications and systems, focusing primarily on the U/I layer.

This position works with the organization's business units and third party vendors to maximize web based opportunities by analyzing and evaluating user needs, business processes and systems. The Developer is responsible for the coordination and completion of multiple projects, ranging from small, single-user applications to those containing broad scope definitions and high organizational impact.

The developer is able to participate in developing recommendations for complex projects of diverse scope and can perform a variety of complex tasks independently.

The developer will provide support in:

1. Service integrations: working with molecular vendors, systems, NAACCR vendors and RedCap / Cloud
2. Operations: Clinical QC apps / systems / services; molecular qc apps / systems / services; file ingestion / processing services
3. Website support
