CROUSE-HINDS SERIES

GUA Outlet Bodies, EYS Sealing Fittings and Unions

**Stainless Steel Explosion Proof Fittings for the Most Demanding
Environmental Conditions**

The ultimate in corrosion resistance and durability.

Eaton's Crouse-Hinds series of stainless steel fittings deliver power where you need it, saving you time and money throughout the life of your facility.

Superior resistance to corrosion and heat, combined with unmatched strength, make stainless steel fittings a long-term solution for even the most extreme environments.

Eaton's Crouse-Hinds series stainless steel fittings are manufactured using high grade 316 stainless steel. Even in the most caustic environments, they are virtually immune to rust, corrosion and discoloration, greatly lowering cost of ownership through maintenance reduction.

The fittings are even self-healing. If scratched, the chromium in the stainless steel will combine with oxygen to reseal its protective layer and maintain its corrosion protection properties.

This long life, low maintenance solution is ideal for:

- Corrosive environments
- Food and beverage manufacturing
- Pharmaceutical manufacturing
- Healthcare facilities
- Wastewater treatment plants
- Marine applications
- Mining applications
