XV300 - flexible, modern, state-of-the-art operator interface and SCADA HMI.

Intuitive user guidance, precise gesture-based controls, multimedia integration - the ease of use we experience every day on our smartphones and tablets has now become a reality in industrial applications as well. Our new XV300 panels with capacitive multitouch technology are not just tremendously intuitive, they are redefining how man and machine interact. Streamlined, high-resolution devices are ready to meet your needs even in harsh industrial conditions.

EAT·N
Powering Business Worldwide

Heavy-duty
With their compact and sleek design, featuring a heavy-duty, flat, anti-glare toughened glass panel, these panels are ideal for industrial applications in harsh environments.

Powerful
High system performance and a powerful graphics processing unit make it possible for our new XV300 devices to have a highly responsive, state-of-the-art user interface and allow for the integration of multimedia elements such as video, PDF and Web contents.

Adaptable
Our new panels can be used in landscape or portrait mode, ensuring that you will be able to fit them where you want while getting the visualizations you need.

Hygienic
Control console mounting creates a flat surface with no sharp edges, which meets strict hygienic requirements. XV300 devices with rear-mounting configuration can be seamlessly integrated into your machine systems.
