Dual Purpose Arc Fault/Ground Fault (AF/GF) Circuit Interrupter

Eaton is expanding its line of Arc Fault and Ground Fault solutions to include the dual purpose Arc Fault/Ground Fault (AF/GF) Circuit Interrupter for residential and light commercial applications. The AF/GF circuit interrupter was developed in response to the 2014 National Electrical Code (NEC) that now requires AFCI protection in kitchens and laundry areas as well as the historical requirement of ground fault protection. Eaton's AF/GF circuit interrupter will offer both types of protection in one familiar package.

The AF/GF Circuit Interrupter provides quick installation and a single location to easily access and identify tripped circuits

Features and Benefits

- Provides one device for both AFCI and GFCI protection, allowing for a single point of reset
- Offers complete protection from arc and ground faults for the entire circuit, including home-runs
- Enables a lower installed cost versus other code-approved alternatives by using only one device to achieve both AFCI and GFCI protection

Key Differentiators

- Eaton's proven reliability of arc-fault detection to reduce unwanted tripping due to interaction with device or appliances
- Integral LED indicates seven different trip causes, reducing troubleshooting time
