Self-Monitoring Contact Block

The M22 self-monitoring contact block offers additional safety in emergency stop applications. This device contains an additional normally open contact that uses a unique plunger to monitor whether the contact block is still attached to the operator. In the event that the contact block detaches from the emergency stop button, the self-monitoring contact block opens the circuit and stops the system – providing an extra safety measure.

M22-K01SMC10

Self-monitoring contact blocks (1 NC & 1 NO in series)
