## ASPECT Camera and Recorder Series IP Range

Intelligent Products. Intelligent Solutions.

COMPLETE RANGE

### Range For All Installations

With IP models available in fixed, varifocal and motorized lens varieties in an array of sizes and models, you will be sure to find the ideal camera to suit your installation. Coupled with NVRs ranging from 4 to 64 channels, the Aspect range is versatile and offers plenty of options to system designers.

CONSISTENT FIRMWARE

### Consistent Firmware

Almost every product you purchase will have the same firmware product as the last, gone are the days of purchasing the same camera in consecutive months only to find that large-scale, confusing and frankly unnecessary firmware changes have taken place.

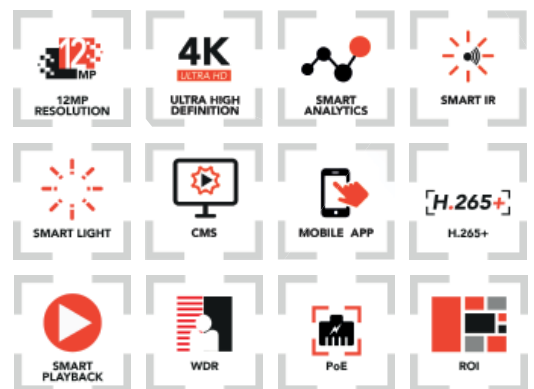

TRIED & TESTED

### Rigorous Product Testing

Every step possible is taken to ensure that a product is ready for use and will stand the test of time. With rigorous tests completed on any product prior to its release, including Hard Drive testing, our products are released with longevity at the forefront of our thinking.
