

XV300 HMI-PLC

Redefine your possibilities while staying ahead with innovation

Intuitive user guidance, precise gesture-based controls, multimedia integration—the ease of use we experience every day on our smartphones and tablets has now become a reality in industrial applications as well. Our new XV300 panels with capacitive multitouch technology are not just tremendously intuitive, they are redefining how man and machine interact. Streamlined, high-resolution devices are ready to meet your needs even in harsh industrial conditions.

An impressive variety of ports and interfaces provides maximum versatility for extensive networking. For example, the two Ethernet ports, which are independent from each other, make it possible to safely and reliably separate the open control layer from the function specific field level.

An SD card slot makes it possible to expand the device's internal memory if necessary. In addition, it can be used to easily load system updates. Moreover, the entire system can be booted and run from an SD card if necessary.

Heavy-duty

- With their compact and sleek design, featuring a heavy-duty, flat, anti-glare toughened glass panel, these panels are ideal for industrial applications in harsh environments

Powerful

- High system performance and a powerful graphics processing unit make it possible for our new XV300 devices to have a highly responsive, state-of-the-art user interface and allow for the integration of multimedia elements such as video, PDF and Web contents

Adaptable

- Our new panels can be used in landscape or portrait mode, ensuring that you will be able to fit them where you want while getting the visualizations you need

Hygienic

- Control console mounting creates a flat surface with no sharp edges, which meets strict hygienic requirements. XV300 devices with rear-mounting configuration can be seamlessly integrated into your machine systems
