

Safety relays

Sentry

The Sentry safety relays are powerful and easy to use safety relays, suitable for all common types of safety applications.

The Sentry series contains basic models for simple applications and easy output expansion, as well as highly flexible models with extremely accurate timer functions.

Sentry safety relays are used in both simple and more advanced safety solutions when safety devices need to be monitored according to the requirements of functional safety standards.

Continuous operation

LEDs and display

3-color LEDs allow for more status messages and simplify troubleshooting. Models with display offer preset configurations and extensive fault information.

Advanced timer functions

Timer functions with an accuracy of $\pm 1\%$ minimize unnecessary downtime.

Multi-reset

The multi-reset function enables reset of up to 10 Sentry safety relays using just one reset button.

Optimized logistics

Universal models

A single safety relay for all common safety applications reduces stock and saves warehouse space.

Multi-voltage

Multi-voltage models offer more flexibility and less stock.

Compact size

All models are only 22.5 mm wide, even models with 2 NO + 2 NO outputs.

Easy to install

Detachable terminal blocks

Detachable terminal blocks speed up connection and replacement.

Switch for reset selection

Manual or automatic reset easily selectable by switch.

Powerful outputs

Powerful outputs allow to drive larger contactors and simplify installation by saving the use of an intermediary contactor.

Applications

Sentry

Monitoring of safety devices

Sentry safety relays make it easy to reach the required level of safety when monitoring safety devices like emergency stop buttons, door switches, light guards, etc.

Expansion of safety outputs

Sentry expansion modules are used to increase the number of safety outputs of a safety control module in order to control more machinery.

Features

Sentry

Timer functions with an accuracy of $\pm 1\%$

Several timer functions are available: On/Off-delay, time bypass and time reset.

On/Off-delay are used to postpone the activation/deactivation of the safety outputs with a preset time delay. This is used in e.g. Category 1 stops.

Time bypass activates the safety outputs for a maximum pre-defined time when the safety inputs are closed. Inching is an example of application.

Time reset activates the safety outputs for a maximum pre-defined time when the safety inputs are opened. Pre-reset is an example of application.

An accuracy of $\pm 1\%$ allows a very precise time to be set in order to increase safety and minimize unnecessary downtime.

Multi-reset

The multi-reset function enables reset of up to 10 Sentry safety relays using just one reset light-button. This simplifies connection, minimizes cabling and unnecessary downtime. The multi-reset function is available for all +24 VDC Sentry models offering manual reset.

Light-button function

The light-button function is used for the multi-reset function, but can also be used for a standard reset button.

The function of the LED in the light-button is the following:

- on** - at least one input is not accepted
- flashing** - all inputs are accepted, reset possible
- off** - all inputs accepted, reset performed, outputs active

Note: if an input is accepted it means that the door is closed, the light curtain is not interrupted, etc.

Configurable models with display

The models with display are configurable and the user can choose between preset configurations and a custom configuration that can be protected by password.

Faster troubleshooting with display

The display minimizes troubleshooting by giving extensive information about internal faults, I/O faults, system faults, function faults and a log of the last 10 errors.

Switch for selection of the reset function

All models can be used in automatic reset and some models allow to choose manual reset, either by switch or by configuration, which simplifies connection. In order to prevent mistakes, it is not possible to change reset function during operation by just flipping the switch.

Powerful outputs

The outputs have a switching capacity of up to 6A DC-13. This allows Sentry to drive larger contactors and saves the use of an intermediary contactor.

Delayed outputs

Some Sentry models have delayed outputs in order to e.g. give a machine time to apply breaking force before power is disconnected.

For models with 2 NO + 2 NO outputs, it is only the second pair of NO outputs that is delayed.

For models with 3 NO + 1 NC, all outputs are delayed.

Single function or universal models

Sentry **SSR** models are single function safety relays designed for a specific application such as 1 and 2 channel devices, OSSD devices or two-hand devices.

Sentry **USR** models are universal safety relays. They are capable of handling most types of applications and safety devices, i.e. 1 and 2 channel devices, OSSD-devices, two-hand devices and contact mats/bumpers/edges. This means that only one type of relay is necessary as a spare, which reduces stock and saves warehouse space.

- a) These models can also be used for expansion of Pluto safe transistor outputs (-24 VDC)
- b) No monitoring of two-channel fault, i.e. max Category 3 without fault exclusion.
- c) The safety relay detects a short-circuit, not a change in resistance.
- d) Off-delay, On-delay, Time bypass or Time reset.
- e) BSR23 must be monitored by another device in order to reach higher than Category 1/PL c according to EN ISO 13849-1, for example a safety relay, a safety PLC or an Orion light guard (EDM function).

Electrical data

Operating voltage

+24 VDC (19.2-27.6 VDC) PELV/SELV
Mains models: 85-265 VAC (50/60 Hz) or 120-275 VDC

Response time at deactivation

20 ms

Maximum switching capacity

DC13, DC1

Up to 6 A (except relays with 2 NO + 2 NO outputs that switch 3 A)

AC15, AC1

Up to 5 A (except relays with 2 NO + 2 NO outputs that switch 3 A)

Mechanical data

Operating temperature

-10 °C – 55 °C

Humidity range

25% ... 90%

Protection class

IP20 (enclosure/electrical cabinet must have at least an IP54)

Mounting

35 mm DIN rail (DIN 50022)

Minimum space between relays in the enclosure

0 mm
