Eden OSSD

Coded, Non-Contact

The Eden Dynamic has been one of the most popular non-contact Safety Switches on the market for well over a decade. With the Eden Sensor up to 30 switches can be wired in series and still maintain a Category 4 / PLe safety rating.

The Eden Sensor has always required Jokab's Vital Safety Controller or Pluto Safety PLC to generate the Dynamic Signal to operate the Eden Sensor, until now....

With Eden OSSD up to 30 sensors can be wired to any safety relay or safety rated contacts making it ideal for simply safety applications with a high number of doors.

Features

- Locally resettable option
- Uniquely coded option
- IP69K
