

Detect Unknown Vulnerabilities that Threat Actors Could Use to Gain Access to Your Networks

Computer and network security are integral to the ongoing operations of every business. Weaknesses within your systems can be reduced by applying proactive vulnerability management.

Protect your network with security scans that identify and sort vulnerabilities in a prioritized report that includes instructions on how to remediate and resolve identified vulnerabilities.

Threat actors are constantly evolving their approach to navigate complex security systems. It's important, as they continue to adapt their approach, that you stay apprised of all assets and vulnerabilities within your systems.

All businesses, but especially those in the small to mid-size, are increasingly targeted for attacks. When compromised, it can take internal, resource-constrained IT teams months to realize the attack occurred. What's worse is that it can take several more months to remediate issues when thinly stretched IT teams must redirect resources, educate them, and simultaneously remediate the issues.

Software weaknesses, unapplied software patches and misconfigurations can open your network up to malware infections. BlueVoyant can give your IT department the power to proactively assess your infrastructure giving your in-house IT the ability to track a vulnerability from discovery through to remediation.

Our Vulnerability Management Service is designed to create less work and more visibility. When a weakness is detected, we can put safety measures in place for our MDR+ clients and increase monitoring of the host until the vulnerability has been mitigated.

BlueVoyant Vulnerability Management Service scans your internal and external systems to identify new assets and risks.

DEPENDABLE COVERAGE

BlueVoyant Vulnerability Management offers you the deep and broad coverage with a database of over 45k Common Vulnerabilities and Exposures (CVEs), 100k+ Plugins, and new releases weekly.

Benefit: We take the guesswork out of identifying potential weaknesses such as missing patches, malware, and misconfigurations.

24/7 SECURITY OPERATIONS CENTERS

Geographically diverse SOCs staffed by former government and leading private sector experts are supported by the BlueVoyant Technology Platform.

Benefit: Experts are available and ready to handle alerts and attacks quickly long after your staff has gone home. SOCs minimize the impact of attacks and lower costs with real-time remediation and faster response times, continuously strengthening your security posture.

BIGGER VIEW, GREATER INSIGHTS

BlueVoyant continuously compiles data from the security community building insights to help better protect you.

Benefit: New plugins are released within 24 hours of vulnerability disclosure (on average) to keep your security up to date.

TIMELY RESPONSE

Fast assessment and simple remediation to assess if systems are vulnerable and fix the problem in real-time.

Benefit: Reduce the time spent researching, validating and prioritizing issues.

COMPLIANCE-FOCUSED

Audit Configuration Compliance against Center for Internet Security (CIS) benchmarks with pre-built templates and policies.

Benefit: Create reports with customized views based on type of threat then shares them with stakeholders as easy to digest data.

Why Clients Choose BlueVoyant Vulnerability Management Service

Faster assessment, validation and prioritization of issues is what our experts provide for our Clients. If your IT team is bombarded with trying to keep up with system updates and is struggling to prioritize, the BlueVoyant expert analysts can help.

We provide you with timely information on the latest vulnerabilities, taking out the guesswork and burdens of being "current" on weaknesses and threats. Clients are relieved to receive a simple set of remediation actions and a streamlined way to check if systems are vulnerable.

Wavelength™ makes it easier to stay on the same page as the experts managing your vulnerabilities.
