ABOUT BLUEVOYANT

BlueVoyant provides advanced cyber Threat Intelligence, Managed Security Services, and proactive Professional Services with forensic capabilities for incident response and remediation.

We help large enterprises with impactful intelligence and offer small and medium enterprises the same kind of software and level of services that large enterprises enjoy - all from a world-class team of experts that would be challenging to amass directly.

A first-things-first cybersecurity company focused on delivering best-of-breed tech and outstanding customer service to businesses around the world. With global SOCs, we are prepared to protect the world over from well-financed threat actors and their newest tools of attack.

Managed Security Services

Our Managed Security Services helps clients achieve the same level of security previously available to only the largest, most well-defended organizations.

BlueVoyant combines an expert team, robust threat data analytics, and comprehensive services and solutions to address the multiple cybersecurity needs of businesses today.

Managed Detection and Response (MDR+)

- MDR+ detects, blocks, and contains malware, ransomware, zero-days, non-malware and file-less attacks automatically. Remote endpoint incident investigation and remediation is led by BlueVoyant cyber intelligence experts. Clients can receive explicit remediation instructions or simply let us remediate and supply after-action reports.

Detection-as-a-ServiceSM (DaaS)

DaaS collects logs from applications and on-premise and/or cloud infrastructure to enable advanced threat detection. Investigations into security alerts are supported by our team of analysts within two global cybersecurity operations centers.

Managed SIEM

Managed SIEM with Splunk® Enterprise correlates and analyzes network logs in real time, aggregating disparate data and applies the latest threat intelligence to filter background noise and identify real security concerns. BlueVoyant experts monitor on-premise and cloud environments with Splunk® Enterprise Platform, maximizing your existing platform investments.

Professional Services

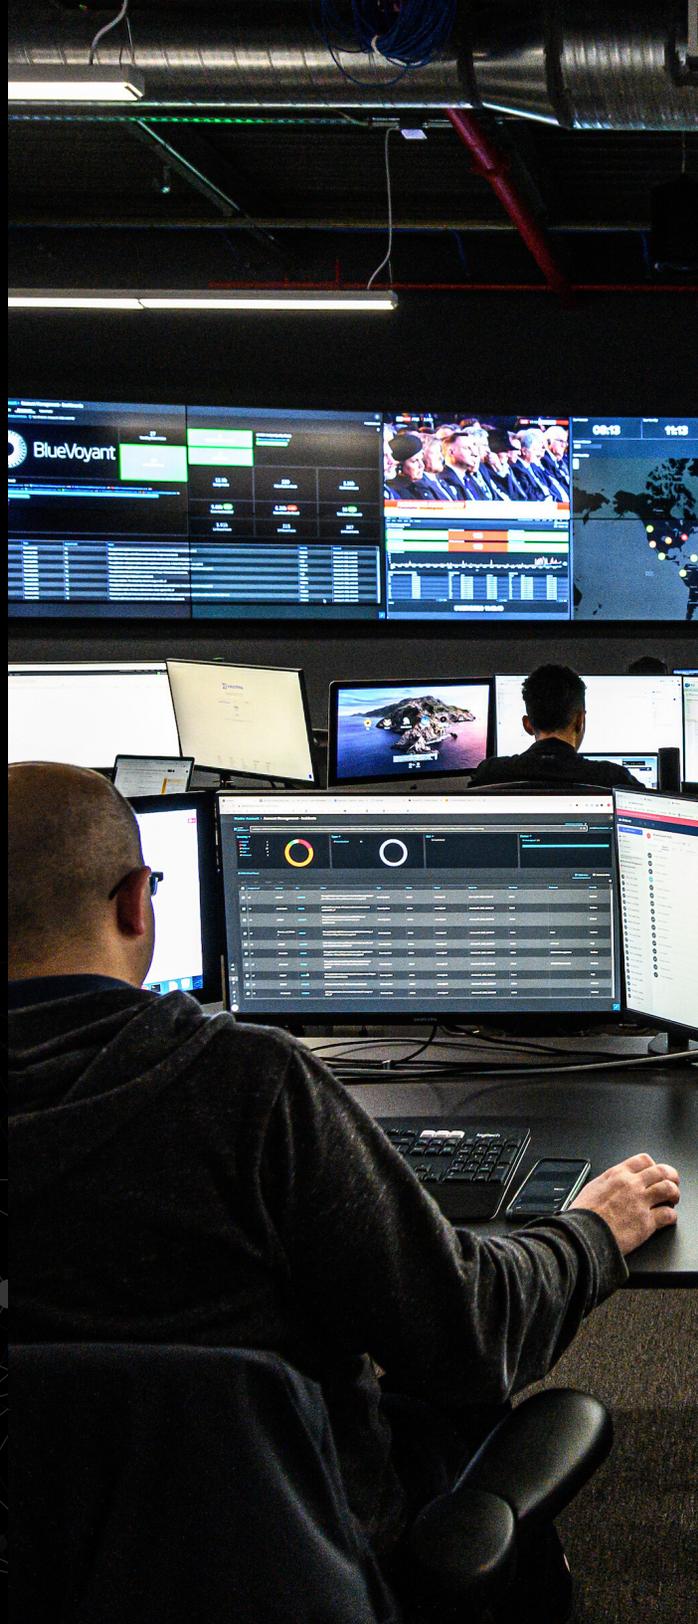

BlueVoyant Professional Services provides custom consulting with proven methodology to support customers through investigations, rapid incident response, and proactive planning and preparation for evolving threats.

Cyber Forensics and Incident Response

- Our investigative approach centers on providing answers to the most important questions: root cause, scope of breach, all data potentially compromised.
- With expertise in every major industry, we have the tools and expertise to help you eliminate threats and ensure the protection of your brand reputation and assets.
- Having led some of the nation's most high profile and complex cyber investigations, we can handle most sophisticated breach events with precision and speed, regardless of whether you are dealing with insider threats, a ransomware infection, business email compromise, or complete malware-based network compromise.

Proactive Services

- We reduce the risk of business operations being disrupted by providing assessments and recommendations for cybersecurity controls improvement.
- Our approach and methodologies help you anticipate threats and enhance internal processes to be better prepared for incidents - giving you the greatest, tailored protection for your most valued assets.

Threat Intelligence

BlueVoyant Threat Intelligence Services monitor your external attack surface, assess emerging risks, and deliver timely, actionable intelligence specific to your organization and your supply chain.

BlueVoyant's advanced Cyber Threat Intelligence Service goes beyond your company's boundaries to see threat actor activities taking place outside your perimeter.

Early Warning

- Provide advanced warning of impending cyber attacks days or weeks before other services.
- Reduce the risk of attack from malicious Internet infrastructure.
- Gain greater insight by engaging our experts to identify and profile your network vulnerabilities from an attacker's perspective.

Enrichment

- Enrich your alerts with external threat intelligence which informs investigations and identifies attacker infrastructure.
- Prioritize threats and eliminate those that put your business at the greatest risk.

Third-Party Risk

- Assess third-party risk based on external monitoring of threats, attacks, and vulnerabilities.
- Identify weaknesses in your supply chain before they can be used to steal data from you and your clients.
